Acknowledgements

This thesis was prepared at the Department of Dental Materials Science, the Academic Center for Dentistry (ACTA), Amsterdam, The Netherlands. The cooperation and support of many individuals helped to make this work possible. Included among these are:

Prof. Dr. Albert Feilzer, who as my promoter provided guidance, scientific advice, constructive criticism, and encouragement. I want to thank him especially for giving me the opportunity to undertake this degree at ACTA. He is both a friend and a respected mentor to me. It was a great pleasure to me to conduct this thesis under his supervision.

Dr. Anton de Gee, my co-promoter, who also offer his support in the development of this research. I am particularly grateful for his fruitful comments and many hours of stimulating discussion. His guidance and assistance in writing the manuscript was extraordinary. His scientific excitement inspired me in the most important moments of making right decisions and I am glad to work with him.

Prof. Dr. B. van Meerbeek, Prof. Dr. T.M.G.J. van Eijden, and Prof. Dr. N.H.J. Creugers, members of the promotion committee for their willingness to judge my thesis and for their critical review of the manuscript.

Prof. Dr. Carel Davidson, who I wish to thank for his contribution as my advisor for the joint supervision scientific mission between ACTA and Faculty of Oral and Dental Medicine, Cairo University, and for providing me with some materials needed for the studies.

Prof. Dr. Fayez Hassan, and Prof. Dr. Mohamed Mohsen, Department of Operative Dentistry, Cairo University, for their ongoing encouragement and support.

Dr. Cees Kleverlaan, for his help during editing the manuscript.

Ing. Arie Wener, for his help during the preparation for the SEM photographs, and Ing. Jacqueline Rezende for her assistance in preparation for the microtensile bond strength specimens.

I am grateful to all my friends from ACTA, for being the surrogate family during the many years I stayed there and for their continued moral support. Pallav, Peter, Giuseppe, Alma, Raimond, Catherine, Niek, Anne, Rien, and Hang; I enjoyed working with you all.

Finally, I extend my deep appreciation to all members of my family especially my wife Amal and my kids Youssef and Jahia. Amal your continuous encouragement and your emotional support helped me to endure being away from you and the kids, without your help the present work would have never been achieved.
