An agent based architecture for constructing Interactive Simulation Systems
Zhao, Z.

Citation for published version (APA):
Contents

2.4.1 Composing an ISS ........................................ 27
2.4.2 Run-time framework ...................................... 28
2.5 Summary ...................................................... 29

3 Agent based activity orchestration 31
  3.1 An ISS as a multiple Module Agents system .............. 31
  3.2 Inherent functionality: component capability .......... 32
    3.2.1 Basic model .......................................... 32
    3.2.2 Capability modelling for the human interaction involved components ........................................... 34
  3.3 Interaction: story and scenarios .......................... 35
    3.3.1 Place transition net .................................. 36
    3.3.2 Scenario representation .............................. 37
    3.3.3 Transitions and actions ............................. 38
    3.3.4 Story: a scenario-net instance ....................... 39
  3.4 World model ................................................ 40
    3.4.1 Basic structure ....................................... 40
    3.4.2 Perception and uncertain belief of the agent world 40
  3.5 Controller .................................................. 42
    3.5.1 Collecting observations ................................ 42
    3.5.2 Action execution control ............................. 42
  3.6 Story execution ............................................ 43
    3.6.1 Basic paradigm: distributed scenario execution .... 43
    3.6.2 Hierarchical execution paradigm ..................... 46
    3.6.3 Centralised coordinator paradigm ................... 47
    3.6.4 Scenario switch and execution paradigm selection 48
    3.6.5 Handling run-time exceptions ....................... 48
  3.7 Summary .................................................... 49

4 Implementation and performance analysis 51
  4.1 Communication agents ...................................... 51
    4.1.1 Data object manager .................................. 51
    4.1.2 Distribution manager .................................. 52
    4.1.3 Events and action execution .......................... 53
  4.2 Module Agents .............................................. 53
  4.3 Putting it all together ..................................... 53
    4.3.1 Current implementation ................................ 53
    4.3.2 Actor and Conductor .................................. 54
    4.3.3 Capability and story descriptions .................... 55
    4.3.4 Run-time configuration files ......................... 55
  4.4 Performance analysis ...................................... 56
    4.4.1 Example components and the test bed ................ 56
    4.4.2 Delay for remote updating shared objects .......... 57
    4.4.3 Location of the RTI execution ....................... 58
## 4.4 Remotely updating objects to multiple Consumers
4.4.5 Message passing  
4.4.6 Object model and update delay  
4.4.7 Summary  

## 4.5 Performance for action reasoning and story execution
4.5.1 Overall observations on the action reasoning  
4.5.2 Overhead of the reasoning kernel  
4.5.3 Reasoning complexity and delay  
4.5.4 Brief comparison between execution paradigms  
4.5.5 Summary  

## 4.6 Discussion and conclusions
4.6.1 Evaluation  
4.6.2 Conclusions  

## 5 Rapid Prototyping of a surgical pre-operative planning environment
5.1 Introduction  
5.1.1 Background  
5.1.2 Goal of the chapter  

## 5.2 From Legacy systems to reusable components
5.2.2 Legacy flow simulation and visualisation systems  
5.2.3 Component 1: C.FlowSimulator  
5.2.4 Component 2: C.Desktop.VRE  
5.2.5 Discussion  

## 5.3 Coupling component instances
5.3.2 Making an interaction story  
5.3.3 Executing an ISS  
5.3.4 Asynchronous data update  

## 5.4 Automatic tuning of service quality
5.4.2 Solutions in ISS-Conductor  
5.4.3 An example: adaptable rate for exporting Flow.Data  

## 5.5 Collaborative interaction in an ISS
5.5.2 Basic support  

## 5.6 Collaborative data analysis and decision making
5.6.2 Collaboratively exploring data  
5.6.3 Experimental results  

## 5.7 Multiple instances of a scenario net
5.7.1 Scenario template and data class mapping  

## 5.8 Summarising discussion
