Table of contents

General introduction

Chapter 1  
Protein quality control in Alzheimer's disease by the ubiquitin proteasome system.  

Scope and outline of this thesis

Experimental chapters

Chapter 2  
Mutant ubiquitin expressed in Alzheimer's disease causes neuronal death.  

Chapter 3  
Mutant ubiquitin found in neurodegenerative disorders is a ubiquitin fusion degradation substrate that blocks proteasomal degradation.  

Chapter 4  
Critical levels of Alzheimer associated mutant ubiquitin cause a shift from substrate to inhibitor of the proteasome.  
Submitted

Chapter 5  
Aβ40 and 42 peptides expressed in the cytosol are efficiently degraded and do not inhibit the proteasome.
