Special events contributed to putting the pieces of the puzzle in right order. The potassium channel conference in Ulm, where I met prof. Clifford Slayman (Yale), who selflessly provided advice, encouragement and insightful discussions. Another of Richard Adrian's students, Prof. CL Huang (Cambridge), was helpful in discussing skeletal muscle physiology. The physiological conference in Prague, where I met prof. ADC Macknight (University of Otanogo), who helped in sorting out the issues concerning Chloride. The courses mathematical modelling by Prof. H Westerhoff, the ERC course by Prof. DL Ypey (LUMC) and the QuB course by Profs Auerbach, Qin and Sachs (State University of New York), where I also met drs. Grossman (University of Illinois) and Milescu. These five individuals challenged me into sorting my thoughts about data analysis and to analyse what is observed, not what might be observed with a perfect instrument or data set. In this particular regard Lorin Milescu (NIH) was very forthcoming in sharing his thoughts and knowledge.

Dr. Jan Siegenbeek van Heukelom hired me and delivered the necessary means to complete the thesis. I enjoyed the freedom Prof. Wytse Wadman provide. Dr. Harald van Mil was very important at every twist and turn during the process.

This bold renegade
carves a Z with his blade,
a Z that stands for Zorro

Part of theme song from Zorro [Norman Foster (words) and George Bruns (music)]. Z refers to Fig. 3.3. Along with Harald there was prof. Martin Bier, who provided distraction with his appreciation of Dennis Rodman. I was challenged by Prof. F. Lopes da Silva in his lessons in science management. I am grateful Prof. CMA Pennartz was forthcoming in judging the manuscript. Prof. Cornelissen and Dr. JP de Jong made special contributions by steering the process in the right direction. In the lab Drs. J Groot, R Lingeman, W Ghijsen, W Raamsdonck, T Werkman, S Nair and W Hesen took part in interesting discussions, ranging from curry to microscopy. I humbly appreciate the opportunity offered by the editors of The Journal of Physiology for inviting me to act as a recurring referee.

I enjoyed being distracted by Roderik and René and other basketball players, and by playing squash with fellow bursalen Marco Roos, Martijn Egas and José Vos.

My present colleagues Alexander, Amir, Anouk, Christa, Hans, Jaap, Julian, Mark, Paul, Pieter, Ruben, Saskia, Victor and all the others provide a pleasant working environment.

The marriage to my beautiful wife, Patty, and the birth of our two talented children, Valentina and Maurice, were events that set things in perspective. In that regard a lot
