Acknowledgements

I am particularly grateful to Michael Ellman for his wise guidance and far-reaching suggestions. His dedication to his work as my supervisor went far beyond what anyone would expect. He is the teacher I would aim to be in my future. I am also grateful to Julio H. G. Olivera for his simple comments on the core of the theory. Their firm support encouraged me to explore new ground. I experienced “the adventure of research” in Olivera’s words. Agustín Duarte and Iván Payá share whatever merit is in chapter 3. Daniel Heymann kindly made useful comments to an early draft of chapter 4. The members of the assessment committee made very helpful comments on the final thesis draft. The embryo of this thesis was probably in my discussions with my father in my childhood and also in the discussions with my good friend the late Oscar Braun during our exile from Argentina. For many years my students at Buenos Aires University had to struggle through my incompetence in finding an adequate theory to discuss the particulars of the Argentinean economy. Ideas I have picked from them and from others along my way through seminars and informal discussions. Errors and omissions are my responsibility. This work is a clear example of the phenomenon that scientific results stem from a multiplicity of efforts by a great number of people. I hope God allows me the joy of returning my share by helping others as I have been selflessly helped.
