Une liste complète, qui supervisaient l'administration du temple dont la Bible nous fournit aussi, probablement la liste complète des grands prêtres. L'exemple de Néhémie, n'hésitant pas à s'opposer aux autorités locales, y compris aux prêtres, nous révèle l'étendue du pouvoir du gouverneur tant du point de vue civil (fortifications, garnison) que du point de vue civil (corvée, taxes...), en collaboration avec les juges nommés directement par le pouvoir central. C'est à partir d'une telle perspective que l'auteur interprète la mission d'Esdras ayant pour but de nommer des juges royaux qui devaient juger non selon un code de lois écrites mais en tenant compte des décès royaux et satrapiques. Elle en conclut : « le modèle de Achaemenid rule proposed by Eisenschtatt is a better description of Persian Yehud than the model of self-governance or its variant, the model of imperial authorization of local norms » (p. 232).

Même s'il point de départ d'une étude à partir de modèles a priori peut être dangereux et s'il parait discutable que la théorie de l'autorisation impériale soit une variante de celle de la Self-Governance, ce livre cesse de tenter compte de la documentation disponible en la replaçant dans son contexte et constitue un intéressant essai sur le fonctionnement de l'Empire Persé. Le Grand Roi semble bien avoir pratiqué une politique pragmatique soutenant ceux qui se ralliaient à lui mais réprimant ceux qui s'y opposaient. L'analyse de la documentation disponible est généralement sérieuse, argumentant dans le détail la position prise dans les sujets discutés comme l'authenticité de la lettre de Darius à Gadatas ou la signification de l'inscription de Xénophos. Cependant cette position parait parfois plus conjecturale (comme l'hypothèse d'une inscription bilingue pour la construction du temple de Jérusalem) ou même irrationnelle lorsqu'elle qualifie Néhémie de frataraka (p. 199), ou semble dénier toute importance aux codes de lois antiques alors qu'ils servaient, au moins, à la formation des futurs juges. D'une manière plus générale, il aurait fallu probablement davantage souligner que, à la différence de la Babylone, de l'Égypte et de l'Asie Mineure, l'analyse de la situation en Judée ne se situait pas au niveau « satrapique » mais au niveau provincial et on reste quelque peu étonné que les parallèles de l'administration provinciale de la Samarie et de l'Idumée n'aient pas été évoqués avec la documentation des papyri de Samarie et celles des ostraca araméens d'Idumée.

Malgré ces quelques aspects discutables, ce livre clair et bien présenté constitue une thèse générale qui a pour arrière-plan une thématique qui devrait aider à mieux comprendre le fonctionnement de l'Empire Persé pendant plus de deux siècles.

Paris, décembre 2006

A. LEMAIRE

**JUDAICA EN HEBRAICA**

One of the first works dealing with Sa'adyah ibn Danan with which I came into contact was Yaakov Mashiah's PhD dissertation (1972, Columbia University), *The Terminology of Hebrew Prosody and Rhetoric with special reference to Arabic origins*, pp. 238-253. In both the Arabic and the Hebrew tradition, metres and prosody are regarded as 'gram- mor'. Medieval Hebrew poetry and grammars of biblical Hebrew go together, because once you have learned the language, you have to practise it in the highest form of speech, namely poetry. Especially since the seventies Angel Sáenz Badillos and Carlos del Valle Rodriguez, have published widely on grammarians of the Hebrew language, and many of their books and articles are devoted to grammarians of Hebrew or poets writing in Hebrew in Spain. Carlos del Valle's *El Divan Poético de Dunash ibn Labraj* (Madrid, 1988) contains a section on poetry and metre in general, including a chapter on the poetics of ibn Dannán (1473), pp. 361-380. Del Valle has now provided us with an edition of the whole text of Sa'adyah ibn Dannán's work on grammar and metrics as part of a larger project aimed at vulgarizing the publications of the Spanish-Hebrew grammarians. The present volume is the tenth to result from del Valle's great project on the history of Hebrew grammar in Spain, namely 'Historia de la Gramática Hebrea en España'. The first volume, which appeared in 2002, deals with Menahem ibn Sarûq (910-970) and his discipies.

In the tenth volume, del Valle edits and analyses the Hebrew grammar of Sa'adyah ibn Dannán ca. (1420-1505), both the Arabic version and the version in Hebrew. The Arabic version is called *Al-Darûri*, the Hebrew version *Ha-Kêlal ha-hekrahi*. Both titles can be freely translated as 'The necessary knowledge of the grammar of the Hebrew language'.

Chapter 1 is a general introduction related to the Jews during the Nasrid reign of Grenade. Chapter 2 deals with the life and work of Sa'adyah ibn Dannán; his linguistic oeuvre and grammatical doctrine is dealt with in Chapters 3 and 4.

Chapter 1 starts with a detailed picture of the rise of the Almohad dynasty (1148-1232) which was a catastrophe for the Jewish communities. For instance, Abraham ibn Da'ud (1110-1180) had to leave Cordoba to escape persecution; he wrote his *Sefer ha-Qabbala* ('Book of the Rabbinic Tradition') in Toledo in 1169 and mentioned the Almohad disaster. Other chronicles — such as that of Abraham Zacuto (d. 1516) — speak about the intrusion of the Almohad leader ibn Tumart into the Arab world in 1142.

Del Valle also quotes other Jewish historians, such as Solomon ibn Verga (15th century), David Ganz (1511-1613), Yosef ha-Kohen (1496-1577), Abraham ibn Ezra (d. 1167) and Isaac Israel (14th century). After the death of Abraham ibn Da'ud, many disasters overcame al-Andalus, and literacy among the Jews disappeared completely. In the first decades of the 13th century, there were no longer any synagogues in al-Andalus. Samuel Cohen (1148) wrote from Fustâti (Old Cairo, Egypt) that the Jews living under the yoke of the Almohads could not profess their Jewishness openly. However, many adhered to the Jewish faith while pretending to be Muslim, a possibility noticed by Maimonides in his treatise *Qiddush ha-Shem* ('Sanctification of the Name').

Judaico-Arabic culture continued in exile, in both Christian Spain and in Provence. The knowledge of Arabic among the Jews of Christian Spain was still conspicuous. Signs of the better treatment of Jews under Muslim rule are noticeable following the rise of the Nasrid dynasty, starting with Muḥammad ibn al-ʿAṣḥar (1232-1273). Their former legal position as dhimmis was apparently restored. Del Valle gives some examples of the convivencia (coexistence) in al-Andalus of
that period, while in Castile Jewish families were forced to convert to Christianity. Many of them emigrated to Granada. In one of his responsa in 1480, Sa'adyya ibn Dannn confirms that many Jews in the Christian territories were forced to convert to Christianity.

Del Valle provides some details about daily life in Granada, namely about the distinctive marks Jews wore upon their clothing, about their economic activities and their trade with Genoa, and about the revival of Jewish learning after three hundred years of silence. For example, Rabbi Juda ben Solomon ibn Kalas left Castile, settled in Granada in 1477 and made a supercommentary on Rashi entitled Meshiah illemim (‘Making the Mute Speak’). At that time there were no Jewish academies in Granada. Yosef ben Moshe Alascar and Abraham bar Yaqob Gabishon were other learned men of the period. There were also many professionals of medicine. The convivencia was fragile in the 1470s, which was a time of pogroms reminiscent of the riots in Granada in 1066. The rights of the Jews under the Christians were laid down in the Guide, works, such as Maimonides’s Sefer ha-shorashim or Spanish-speaking students. The Hebrew version is a ht-

Chapter 2 is devoted to the life and work of Sa’adya ibn Dannn (ca. 1440-1493), the son of Maymun, whose family had been in Granada since ca. 1300. After the 1492 expulsion, the family settled in the Maghreb; Sa’adyya died of pestilence in Oran in 1493. His intellect was multifaceted: he dealt with grammar, lexicography and philosophic speculation. He was the director of a Jewish seminar, Rabbi of Granada, a Halachist (student of Jewish law) and a surgeon. Del Valle lists 13 publications by Sa’adyyah, who also copied a lot of works, such as Maimonides’s Guide, the Book of Elements by Yosef ben Yehoshua ha-Lorqi, and many others. He also wrote wine and love poems for boys and girls. We find a selection of his poetry in the parts of his grammar that are devoted to metrics. About possible pederast or homosexual passages in his poetry, del Valle says (p. 87): ‘Apparently there are at least reasons to think that the criticisms of ibn Dannn’s love poems were due to the exaltation of his love for the ephebe’. On the other hand, del Valle noticed that there are poems in which the male word for ‘beloved’ [ahubi] refers to a woman.1)

This part of the chapter, which is about the life of Sa’adyya ibn Dannn, is concluded with a quotation from a Granadian poet, Isaac Mar’eili (p. 89): ‘In Granada a light was spread/ which subdued a whole generation/ till some Christians have known Masoretes and Qaraites. He seems to have known Masoretes and Qaraites. He quotes a lot of medieval grammarians and Hebrew poets.

Chapter 4 deals with the grammatical doctrine of Sa’adyya ibn Dannn about language in general and Hebrew language in particular. A language system can be dakkhil (internal/conceptual) or kharij (external/physical). Language, despite having its origin in God, is compatible with the conventional origin of language. God distinguished mankind from animals by Reason: in the same way he distinguished Hebrew from the other languages. Hebrew is the gate of the Torah. Hebrew is the perfect convention.

Grammar is based on predominant linguistic features without taking into account irregularities. There are three fundamental vowels in Hebrew, as there are in every other language. For the consonants he distinguishes five groups of articulations, namely gutturals [’, h, h,’], palatals [gykq], linguals [dtnt], dentals [z, sh, s, r, s] and labials [bmp], in

1) In fact already in the famous pre-Islamic Arabic first hemistich of the Mu’allaq by Imru’ul-Qays (d. 550): qifd nahki min dhikra habibin wa-

manzilii/ the female beloved was indicated with a ‘male’ word (habib). A.S.
conformity with the classification of the Sefer Yesira (7th century).

There are three fundamental vowels according to the three basic movements of the universe (from the centre, towards the centre and around the centre). The subdivision he makes is taken from Yosef Qimhi (c. 1105 — c. 1170). Ibn Dannan distinguishes within the three groups of vowels the categories of rough, fine and finer.

Most words (nouns and verbs) have three consonants, but there are also words with four, five, six or seven letters or consonants. Of 22 letters (consonants), 11 are always radicals, while 11 can also be servants because they can also have the function as indicators of morphologic, syntactical and other categories. Sa’adya uses mnemotechnic phrases; for instance, the sentence ‘ani ha-koteh la-shem’ contains all servile letters. There are three kinds of words: nouns, verbs and particles. He has a questionnaire which every reader has to go through in order to analyse words grammatically.

He discusses verbs with the usual categories of sound, defective, geminate, contracted and soft, referring to the combinations of radicals. The traditional eight conjugations (or stems) are reduced by ibn Danan to four. This category of particles contains not only one letter prepositions but also elements of verbs and nouns, such as the verbal suffixes -ta, -ti and -tem for the perfect tense and prepositions combined with personal suffixes.

Ibn Dannan discusses how pictures are described with mnemotechnic devices such as the word ‘etan’ ['ytn] comprising the consonants for the formation of prefixes of the future tense, ‘yah tam’[yhtm] for verbal stems, etc.

At the end of the grammatical work, Hebrew prosody (based upon Arabic) is dealt with. His predecessor Yehudah ha-Levi (1085-1141) published the first metrical treatise. Sa’adya ibn Dannan recognizes 16 metres with only 12 main metres. He is the first to use Hebrew terminology as a translation of the Arab terms.

All the subjects discussed by del Valle derive from the texts that appear in the subsequent pages of his volume: the edition of the Hebrew text Ha-Kelal ha-hekrahi be-di'iqduq ha-lashon ha-‘ibrit, and the Arabic text Al-Daruri fi ‘l-l-
