Acknowledgements

First and foremost, I would like to express my deep gratitude to my supervisor, Dr. Anne de Visser, for introducing me into the interesting world of strongly correlated electrons and always keeping our research heading in the right direction. Dear Anne, it is really great to be a part of the group. Thank you very much for your close daily guidance, your patience in assisting me during the course of this work, your kindness, and your opportune encouragements. I know for sure that you have spent so much time in carefully checking and intensively correcting my thesis manuscript. Both consciously and unconsciously, I learned from you the ways of thinking, approaching and presenting a scientific aspect, and of course a great deal of low temperature experimental techniques and methods. I am very grateful to my promotor, Prof. Mark Golden. He always provided me with an unflinching support, and made very clear and constructive suggestions, which often gave a fresh impetus to the problem in hand. One “strange” feeling was that after the discussions with Mark, my energy was fully recovered.

I'm much obliged to Prof. Than Duc Hien, Prof. Nguyen Phu Thuy, Prof. Nguyen Duc Chien, Prof. Vu Ngoc Hung and Dr. Pham Thanh Huy of the International Training Institute for Materials Science (ITIMS), and Prof. Nguyen Huu Duc of the College of Technology, for their continuous support and encouragements. Since I was an undergraduate student, they have kept an eye on my study, given me useful advices and imparted the essential knowledge that make me feel more confident. I would like to take this opportunity to thank Peter de Goeje, Arend van Leeuwen and Ngo Truc for their kind great help and hospitality to Vietnamese students. Dear Arend, you are always warmly willing to assist me in dealing with complicated paperwork.

I am very much indebted to Dr. Serdar Sakarya, Dr. Niels van Dijk, Dr. Jacques Klaasse, Dr. Huang Ying Kai, Prof. Ekkes Brück and Prof. Jürgen Buschow for their stimulating

discussions and their insightful comments to my work. At the starting-point of the research, I have profited enormously from working with Serdar. Dear Ekkes, thank you very much for your kindness and your assistance. Next to Anne, I have personally regarded you as an advisor. I owe you a lot for letting me use the SQUID and MagLab, even when I occasionally offended the regulation time schedule. Dear Jacques, I have thoroughly enjoyed the time we spent together in taking the beautiful specific-heat data. When the measurements were finished, I often whispered to myself how lucky I was. Dear Huang, I very much appreciated your tireless attempts in growing high quality single-crystals for us.

An important part of this thesis work, *i.e.* low-temperature specific heat, high-field magnetization and μ SR experiments, has been successfully carried out using the facilities in research groups outside the Van der Waals-Zeeman Instituut (WZI). I would like to express my sincere thanks to Prof. Hilbert von Löhneysen, Dr. Andreas Hamann and Dr. Tobias Görlach of the Universität Karlsruhe, Dr. Harisson Rakoto and Dr. Jean-Marc Broto of the Laboratoire National des Champs Magnétiques Pulsés in Toulouse, and Dr. Alex Amato, Dr. Daniel Andreica and Chris Baines of the Paul Scherrer Institut in Villigen for their help and fine collaboration. Also, I would like to thank Prof. Philipp Gegenwart and Dr. Hiroki Yamase for the nice discussions we had every time seeing each other.

This thesis could not have been completed without enormous help from all staff members of the WZI. Many thanks are given to Ton Riemersma, Hugo Schlatter, Ton Gortensmulder, Bert Zwart, Gertjan Bon, Bert Moleman and Willem Moolhuyzen for their great support in sample preparation and characterization; René Rik for supply of cryogenic liquids; Harry Beukers, Joost Overtoom, Daan de Zwarte, Wietze Buster, Theo van Lieshout, Johan te Winkel, Hans Agema, Frans Pinkse, Ben Harrison, Piet Sannes and many others for support from the mechanical and electronic workshops; Mariet Bos, Rita Vinig, Luuk Lusink, Ineke Baas for all administration assistance; Dr. Jeroen Goedkoop for fruitful discussions in our groupmeeting; and Prof. Ben van Linden van den Heuvell for his help with Mathematica.

I would like to thank the members of my thesis committee for their time, interest, and useful comments as regard the dissertation.

My stay in the WZI was made enjoyable due to Gianni, Ale and Fendy. I should admit that it is very providential, at least to me, when we all joined Anne's group. In such a very nice working environment, we always helped each other, share many own opinions, not only in

physics but also in life, as well as a lot of fun. I will never forget the exciting boat trips around Amsterdam and the interesting talks with Gianni, and the moments when Ale, the most beautiful and only girl in our group, created a cheerful atmosphere by her meaningful winks, and, when Fendy made his boyish actions. Dear Fendy, you have contributed a large number of results presented in Chapter 8; thank you very much for your company. I am also thankful to my colleagues Dirk, Dennis, Leonid, Meena, Eric, Tegusi, Lian, Iman, Anton, Freek, Sanne, Wing Kiu, Rosanne, Stan, Jorge, Philip, Tracy, Mounir, Asmae, Vijayakumar, Oleg, Nacho, Henk, Salvo, Michele, Barha and Xerxes for the friendship during my pleasant period in the WZI.

I wish to express my sincere gratitude to my Vietnamese friends whom I have met in the Netherlands, in particular Quynh Chi, Vinh, Hanh, Quyen and her family, Ha *tau*, cô Lien, Duc, Thanh, Son, Quoc Anh, Nghia, MACC, Quynh Anh, Thang's family, Thieu, Nga, Giang, Kien, Hoang, Tri, Dung, Thuy, Van Anh, *chị* Thanh's family, Khuong, Lan, Chi, Diep, Minh, Thu, Phan *gia*, Viet Hien, Minh Anh, and ITIMS people Hien, Tu, Minh, Thang, MA Tuan, NA Tuan, Duong, Toan, Thuan. Thank you all for the warm relationships and the time communicating with me, that somehow partly kept me in equilibrium for the past four years.

Special thanks should be given to Ngoc *den*, Ngoc Anh, Hieu *liu*, Hien, Thanh, Giang *cola*, Le Anh, Minh Trung, Tuan *cohuong*, Chi *beo* and *anh em* IB1. My dear friends, you are always there for me. I love you all.

With all my heart, my deepest thanks are devoted to my beloved family: my grandmother, my uncles, my aunts, my cousins, the parents-in-law of my brother, especially *bác* Nhã, *bác* Tài, my parents *bố* Bảo, *mẹ* Cúc, *chú* Phú, *anh* Việt, *chị* Hồng, Trung *cua*, Hồng, An *cói* and Han-Carla, for their ever patience and constant support, their daily encouragements and boundless love. All these things I could do, just for you.
