PREFACE

Praise to almighty Allah, creator of the heavens and earth and Lord of lords, who gave me the potential and ability to complete this dissertation. All of my respect goes to the holy prophet Muhammad (Peace be upon him) who guides us to the right path.

Academic research involves, not only the efforts of the researcher, but it also requires generous and sincere cooperation of many other accessories like different departments, research institutes, libraries and consulting personalities. The present Ph.D. thesis is likewise the result of valuable inputs from various quarters.

I would like to pay tributes and thanks to my parents, brother, sister, wife and children whose countless prayers and endless co-operation buoyed me up in every aspect of the life. I am also thankful to all other members of my family who always prayed for my success and who were always ready to spare me for this task. Many many special thanks to my loving father and younger brother who always took care of all the family matters themselves and spared me for my studies and research.

On the top of that, I would like to pay my gratitude to all of my teachers throughout my academic career. Especially, Mr. Naseer Ahmed Kiyani at my school level, Mr. Asad Hussain Zaidi at my college level, Dr. Muhammad Aslam, Dr. Muhammad Zafayab, Dr. Faqir Muhammad, Dr. Javaid Shabir, Dr. Zahid Asghar, Mr. Jamshaid Iqbal, Mr. Zawar Hussain at my university level and last but not the least Dr. Ronald J. M. M. Does during my Ph.D. research. They all helped me a lot, in different capacities, in learning new and new things.

I am grateful to all of my colleagues and friends, at Quaid-i-Azam University Islamabad Pakistan, for their contributions in different capacities. Special thanks to all the faculty
members of Department of Statistics of this university for their helping attitude throughout my studies and research work.

I also thank the Institute for Business and Industrial Statistics of the Department of Mathematics at the University of Amsterdam for their cooperation throughout my research work and finally for the hospitality during the last phase of my thesis. The conversations with Dr. Jeroen de Mast, Dr. Henk de Koning, Mr. Benjamin Kemper, Mrs. Marit Schoonhoven were very stimulating. Thanks also to Mrs. Atie Buisman for her administrative cooperations throughout this period.

I am deeply indebted and express my deepest gratitude and profound respect to my supervisor Professor Dr. Ronald, J. M. M. Does, for his thoughtful guidance during the course of my research work. He found time out of his busy schedule to minutely discuss with me different aspects and the organization of my thesis, and make valuable comments and suggestions.

This Ph.D. thesis is based on final versions of some published, accepted and submitted articles. I would like to say thanks to all the referees and editors for their helpful comments which always helped a lot to improve the initial versions of these articles and guided me a lot to learn many new things of which I was otherwise ignorant.

Last but not the least, I would like to thank all of my friends for their help and cooperation. Especially, Mr. Zawar Hussain, Mr. Rizwan ul Haq, Mr. Zahid Pervaiz, Mr. Aqueel ur Rehman and Mr. Ahmer Mahmood for their useful suggestions and moral support during different phases of my research work.

MUHAMMAD RIAZ
