In the past four years there have been many moments at which I believed or even was sure that I would never finish my Ph.D. The thesis that you are holding in your hands suggests that somehow I did. Now I would like to thank all the people whose support, advice, or efforts helped to make this possible.

First of all, I am grateful to my supervisors Maarten van Someren and Bob Wieлин. Maarten, thank you for always taking the time to really think about my work. I very much enjoyed your enthusiasm during our many long and deep discussions. I am grateful to Bob for his detailed comments on my thesis and for providing me with structure when I needed it. Bob, your optimism gave me the confidence that I would be able to do it.

I really appreciated the collaboration with my colleagues from TNO and the LUMC. Laurence Alpay, Nicole Ezendam, Marcel Hilgersom, Ton Rövekamp and Pieter Tousaint, your work provided me with an exciting example case for many parts of my research. I also owe many thanks to all organizations who selflessly trusted us with their log data. Without their cooperation I could not have done any of the evaluation studies reported in this thesis. Furthermore, I wish to express my gratitude to the Netherlands Organisation for Scientific Research (NWO), who funded this project.

One of the things I enjoyed most about my Ph.D. research was the warm and inspiring environment provided by my colleagues at the HCS laboratory. I especially want to mention my roommates Sophia, Viktor and Niels for making room 30 such a pleasant place to work. The uncountable pieces of advice they gave me about more and less important issues were absolutely indispensable for the success of this mission. Jan, Jochem, Wouter and all others, thank you for the interesting lunch discussions. Matthijs, thanks for putting things in perspective with a healthy dose of gossip.

I thank my friends Odile and Frendy for being happy for me when things went well and providing the necessary distraction at less fortunate moments. I thank Karel, Wil, Laura and Alistair for always having faith in me, even at times when I did not. Moreover, I am grateful that time after time they were willing to proofread parts of this thesis and participate in my experiments. Finally, I would like to thank Willem, who supported all my decisions to abandon and to continue this project and who made me feel I did not have to do it all alone.
