ACKNOWLEDGEMENT

The completion of this thesis indicates the end of my PhD journey. Look back to the past 4-5 years, full of ups and downs, excitement and frustration as well. But luckily, I have received loads of support and assistance in various ways from many people.

In the first place, I would like to express my appreciation and thanks to my promoter and supervisor Leendert Hamoen for offering me an opportunity to study and work in the Bacterial Cell Biology (BCB) Group in 2014, and giving me the excellent guidance throughout my research projects. His deep insight, passion enthusiasm, and rigorous attitude to the science, made a deep impression on me, and I learned much from him during my PhD, inspiring me to continue my professional career and fight for higher academic achievement. I am also grateful to Tanneke den Blaauwen for her insightful discussions and advices for my PhD projects, both during group meeting and coffee time. I also show my much appreciates to both of you to provide positive recommendation when I was looking for a posdoc position.

I would also like to thank all the current and past lab members of BCB group, especially Michaela Wenzel and Gaurav Dugar, both of them are very nice colleagues and gave me much support and advices in my experiments and data analysis. Also much thanks to Tjalling, Jolanda, Norbert, Annelies, Nils, Edward, Laura, Terrens, Pranav, Alejandro, Xiaolong, Jinglan, Biwen, Yaozu, Zihao, Xinwei, Laureen, Elisa and all the students for their accompany, help and friendship both in and out of lab. I cherish the Amsterdam moments staying together with all of you even living in Boston now.

Of course, above is not all. There are too many friends to mention, especially Dongdong, I am lucky to take the same flight and know him in the first trip to Amsterdam, he acted as my personal barber for 4 years and his humorous & witty gave me a deep impression. Meanwhile I also would like to thank my other Chinese friends in the Netherlands, it's a great honour to know all of you during my study in Amsterdam.

Finally, I would express my much appreciates to my family for the consistent support during my past few years' staying outside, especially my wife, Huahui. Her accompany

makes my dull PhD life more wonderful. She even gave up her favourite job as a Doctor, in order to stay together with me to give me a warm family. I would keep the gratitude to her in mind forever. Meanwhile, I also feel guilty to my parents, and did not stay together to take care of them when they are sick in bed after experiencing the surgeries successively. Thanks to my older sister, she undertook the responsibility and helped me to look after my parent during my PhD. I cannot survive and finish my thesis without their supports behind.
