I am deeply indebted to my supervisor and promotor Prof. Gerard H. Wegdam for his enthusiasm in guiding me in the academic field and for his help in all aspects of my life. I can not find any word to express the appreciation, although I could dedicate the whole acknowledgement to you. You took me in person to Milan and Grenoble for the measurement. The main result of this thesis originates from the experiment in which only you and I went through the consecutive four days overnight beamtime in Grenoble. Finally you convince ESA to take our experiment in space. I am proud of it! I only can say: I am so lucky to meet you. In the meantime, I would like to thank your wife as well. I remember your hospitality when Sara and I were guest in your house.

I would like to thank Narayanan from the ESRF for offering me the opportunity to perform the measurement in ESRF and for continuous support to complete this project. Your accurate academic attitude definitively is inscribed in my mind. I never knew that the supervisor made a sample for students till I worked with you in the chemistry lab. The kind offer of research beamtime kicked off the main result in this thesis. Many thanks for your hospitality in ESRF during the measurement and patient correction of our paper afterwards. Your contribution to this thesis and my Ph.D is invaluable.

I appreciate Peter Schall’s contribution to this thesis. Especially in chapter 5. The real space study using microscopy arises from your proposal, although the results are not as perfect as you expected, some results already invoked some potential future research. Your “German” style to correct the paper is very helpful to obtain a good quality paper.

Many special thanks to Jakub (Kuba). First of all, part of the results about fluorinated particles in chapter 5 comes from your master’s project; secondly, you spent some time in proof-reading my manuscript even where you are in the US now. Thanks to
support me at the stressful moment.

The results presented in Chapter 7 are mainly from Daniel’s effort. Your sensible insights on research easily combine two systems to get PRL in an efficient way. I appreciate your sharp eyes to point out many important results which we neglected. Some gratitude to Dirk, not only because of the collaborated paper but also because of the continuous help when I requested it.

Some gratitude to Prof. M.A. Cohen Stuart, Ab van der Linde and Wim Threels from Wageningen university for offering me the opportunity for electrophoresis measurement.

I would like to thank Prof. Friso van der Veen for sharing his project with me in the PSI. The three stitches on my chin remind me that scientific work is not easy at all. A good physical condition is highly wanted to support the tough beamtime. From the experiences of collaborating for the confinement effect project, I gained a bit knowledge in working in the beamline, which is helpful for my own beamtime afterwards. Much gratitude also to Ana, Heilke, Oliver, Franz, Timm, Dillip etc. The team’s working spirit and environment in PSI made a deep impression on me. I enjoy very much working with you guys!

Some colleagues from Milan university have contributed to the development of this system. It was great pleasure being in your lab for the preliminary test to study this system by means of near field scattering. I feel Italian people’s hospitality and personality when I work with Prof. Giglio, Marco, Robert, etc.

I would like to mention William Meyer from NASA, the first American scientist who I am working with. We spent three months working on the local oscillator in the basement. You taught me how to design the setup the way you wish. I benefit from your persistent and so-called American working style.

My special thanks to Prof. Frank de Boer for offering me the opportunity to work in University van Amsterdam. I appreciate your hospitality towards Chinese people very much. Thanks to your wife Marija.

I would like to thank the committee members of my thesis for their patience to read the preliminary version of manuscript and for their comments. Especially I appreciate Prof. Peter Bolhuis for his detailed list of comments and criticisms and Dr. Jeroen Goedkoop, who corrected vague points together with me. It is very useful to improve the quality of the final version of the thesis.

To make this thesis, I thank Stan for offering his template and continued help in solving the weird latex problems. It is useful to talk to Iman as well. I would like to thank Sara for the information on how to proceed the complex routine for the
defense. She always stands by to help me. Salima always gives me a hand when I have question, although she is in France now. Thanks to Richard for the proof-reading of my manuscript.

I am deeply grateful to Rita, Mariet, Roos, Luuk and Ineke for their help with the paper work and practical help in life.

The working environment in the WZI is enjoyable. First of all, I would like to thank all my colleagues from the mechanical workshop and electronic workshop. I am so bad at remembering names, especially Dutch name. Although I can not mention your names here, every nice face is clear in my mind. Especially, I would like to thank Ben Harrison for sharing your knowledge of Labview and introducing me to the fun of Judo. Secondly, I thank the director of the institute Mark Golden for assigning me as a board member of the social club. Many thanks to other board members Carolijn, Stan, Amsae, Salvo. I have to address Joost, who took care of all the catering to help us in each event. Finally many colleagues and friends of the WZI have contributed to a friendly and pleasant atmosphere. The soft matter group: Rudolf, Peter, Daniel, Salima, Sara, Asmae, Yves, Duc, Mounir, Vija, Alexandra, Remy, Oleg, Javier, Natalie, Noushine, Nadia, Nazly, Kuba, Bert, Justin, Sybren, Rose. The hard condensed matte group: Mark, Jeroen, Anne, Huangyingkai, Tom, Ekkes, Sanne, Freek, Nacho, Salvo, Gianni, Iman, Huy, Alessia, Ha, Wieteke, Dolf, Thanh, Tegus, Fredy, Marco, Dennis, Sharareh, Leonid, Wim, Huib, Bert, Ton, Hugo, Tom. Quantum gas and quantum information: Klaasjan, Ben, Tom, Robert, Jook, Paul, Philip, Antje, Jan-Joris, Tobias, Sebastian. I also want to mention some colleagues from ITFA, Bahar, Theo, Gerarado, Pasquale, Srdjan, Bernard, Liza, David.

Living in a country with a totally different culture, it is not easy without friends’ support. I am deeply indebted to Ton. As you promised to my parents, you really take good care of me, especially when I just started the life in Holland. I am so lucky to meet all the nice Dutch people around: my old neighbors: Henk, Door, Geer and Ben. Thanks to take care of my parents when they visited Amsterdam; my landlord: Jan van Vuure, I enjoy living in Emmastraat a lot; Janney, Malu, Ruth, Joris, Jeroen, Eric, Marije. Jiejie, Lifeng, Nelly and Jo.

Since I joined the ACSS organization, my spare-time life has been colorful and busy. I really appreciate our efficient team organizing seminars, parties and contests. I would like to thank Yanjing, Huiye, Huhai, Xiaoyuer, Mengxiao, Fangbin, Xiaosong, Kangfeng, Jiayang, Shaojie, Chengxuan, etc.

Sybren, I do not know how to thank you for all of the support when I was in the stressful writing stage. Your input and effort were clearly shown in the thesis. I also want to thank Hugo, Arina, Vincent, Marwa for having a good time with you!
Last words are dedicated to my parents. baba, mama, xiexie ni men du wo de zhi chi he li jie, wo neng chu chu ti hui dao ni dui wo de ai. wo ba zhe ben lun wen xian gei ni men. qin ai baba mama, yong yuan ai ni men de nv er.
