You will be contacted as soon as possible.
Contents

1 Introduction
   1.1 Polymers ...................................... 1
   1.2 Computer simulations ........................... 2
   1.3 Outline of this thesis .......................... 4

2 Theory and computational methods
   2.1 Introduction to polymer physics ............... 8
      2.1.1 The size of a polymer chain .............. 8
      2.1.2 The Gaussian chain ...................... 9
      2.1.3 The excluded volume chain ............... 10
   2.2 Introduction to computer simulations .......... 15
      2.2.1 The Andersen thermostat .................. 15
      2.2.2 Dissipative Particle Dynamics .......... 15
      2.2.3 The Lowe-Andersen thermostat .......... 17
      2.2.4 Alternative mesoscopic simulation methods ... 19
   2.3 Simulating polymer chains ..................... 23
   2.4 Conclusions .................................. 25

3 Solid-Fluid boundary interactions in mesoscopic model fluids 27
   3.1 Introduction .................................. 28
   3.2 Description of the method .................... 30
   3.3 Results ..................................... 34
   3.4 Discussion and conclusions ................... 40

4 Drift velocity of single ideal polymer chains in microfluidic capillaries 43
   4.1 Introduction .................................. 44
   4.2 Methodology .................................. 47
      4.2.1 Polymer model ............................ 48
      4.2.2 Solvent model ............................ 48
      4.2.3 Solid geometry ........................... 49
   4.3 Results ..................................... 50
   4.4 Discussion and conclusions ................... 57

5 Flow of concentrated polymer solutions in microfluidic capillaries 59
   5.1 Introduction .................................. 60
   5.2 Simulation details ............................. 64
   5.3 Calculated hydrodynamic properties of concentrated model polymer solutions ....... 67
5.4 Calculated flow profiles for concentrated polymer solutions in a capillary ................................................. 68
5.5 Slight slip model .............................................. 69
5.6 Comparison of the slight slip theory with simulation and experiment .......................................................... 77
5.7 Volumetric flow rate ............................................ 81
5.8 Polymer drift velocity .......................................... 83
5.9 Discussion and conclusions ................................. 86

6 Long polymer thermodynamics from short blobby chains 89
  6.1 Introduction ................................................. 90
  6.2 Effective interactions in a blob chain ................... 94
  6.3 Simulation method ........................................... 97
  6.4 Results ....................................................... 101
    6.4.1 Structure in the dilute limit ......................... 101
    6.4.2 The osmotic pressure ................................ 103
    6.4.3 The pressure of a spherically confined polymer ... 106
    6.4.4 Rheology ............................................... 107
  6.5 Discussion and conclusions ................................. 109

Bibliography .................................................. 113
Summary ....................................................... 121
Samenvatting .................................................. 125
Dankwoord ..................................................... 129
