Multi-scale interactions between soil, vegetation and erosion in the context of agricultural land abandonment in a semi-arid environment

Lesschen, J.P.
Acknowledgements

The writing of a PhD thesis is not the work of only one person, but the result of cooperation with many other people. Therefore I would like to thank everyone who in one way or another contributed to this thesis. First of all I would like to thank Koos Verstraten for being my promoter. Although we did not have very intensive contact during most of the PhD, you were always interested in my work and arranged the necessary conditions for doing good research. Many thanks I own to my co-promoter Erik Cammeraat. Erik, you introduced me very well into the world of soil erosion and learned me a lot about erosion monitoring and laboratory measurements. You also gave me a lot of freedom to come with my own ideas and make my own plans, which I highly appreciated.

This PhD was part of the RECONDES project, a three year international project financed by the European Commission. I very much enjoyed the collaboration with the people of the RECONDES team. I would like to thank Janet Hooke of the University of Portsmouth for coordinating the project perfectly and in such a way that collaboration was stimulated and people were made enthusiastic. Peter Sandercock thanks for all your GPS surveys and Miguel Marchamalo for the connectivity surveys. Our Spanish partners of CSIC-CEBAS introduced us to the Carcavo basin, assisted us with plant species determination, downloaded our monitoring data and arranged nice restaurants for the RECONDES meetings. Victor Castillo, Gonzalo Barberá, José Antonio Navarro, Carolina Boix Fayos and José Ignacio Querejeta thank you all for that. Our colleagues Bas van Wesemael and André Meerkerk of the Université Catholique de Louvain are thanked for their collaboration regarding the balloon photography, connectivity mapping and rainfall simulations. I also enjoyed working with Jean Poesen and Sarah de Baets of the Katholieke Universiteit Leuven and Dino Torri, Lorenzo Borselli, Michela Marignani, Pilar Salvador of CNR IRPI in Italy.

The most important part of a PhD is writing papers, therefore I would like to acknowledge the co-authors of my papers. Erik Cammeraat, Kasper Kok, Peter Verburg, Annemieke Kooijman, Bas van Wesemael, Harry Seijmonsbergen, Janet Hooke and Jeroen Schoorl thank you all for your constructive comments and suggestions, which greatly improved the quality of the papers. Also the anonymous reviewers of the papers are acknowledged for their useful suggestions and corrections.

A special thank I owe to Francisco Garcia and Gregorio, who allowed me to install monitoring equipment on their land and to store our equipment in their farm. Besides, I was
Acknowledgements

always warmly invited to join their typical Spanish lunches on Sundays. I also thank
Inmaculate Castellón of the Cooperation in Planes and Tomas Navarro Martinez from
Baños de Fuen Santo for the storage of our equipment.

Wouter van Gorp, Elmer Cladder, Susanne Vijfhuizen, Margriet Achtereekte, Tim Nieman,
Tom Loring and Richard Kanbier were all students who did their master thesis research or
geo-ecology course within my PhD research. Thank you all for the collection of very useful
data and I enjoyed doing fieldwork with you. I also want to express thanks to the people of
the laboratory, Leo, Ton, Piet, Bert, Leen and Joke, for analysing my soil samples and for
your assistance when I was doing analyses on my own.

Although we did not move to Amsterdam when I started this PhD, my colleagues at the
UvA familiarised me with the university and the city. First of all I want to thank Femke for
being one of my paranimfs and for all our talks about the struggles of a PhD and all kinds
of other subjects. Also thanks to Boris, Klaas, Sanneke and Maartje with whom I spent my
lunch breaks and had nice conversations, and to my roommates Klaasjan, Jasper, Ulrich,
Klaske and Alejandro.

Also my friends and family indirectly contributed to this thesis by showing their interest
and providing the necessary social distraction. I want to thank Ronald for being one of my
paranimfs and for spending part of his holiday digging out cables and sensors, Roel and
Noud for climbing the Almorchon with me, and Thomas for giving me some useful tips
about the printing of a thesis. I want to thank my parents for all their support and the
interest they always showed for my research. They even came to visit and help me during
one of my fieldworks in Spain.

The last words of gratitude are reserved for Irina and Rubén. Querida Irina, quiero
agradecerte mucho por tu paciencia y apoyo durante estos cuatro años. Yo se que no te
gustó mucho mis viajes frecuentes al extranjero, pero si me diste la ayuda para terminar
este doctorado con éxito. Y finalmente para mi querido Rubén unos palabras, tu nacimiento
me dió mucha felicidad y energía para terminar rápido esta tesis. Aunque no haya podido
darte tanta atención en este periodo como quería, desde ahora voy a pasar más tiempo
contigo.
