Figure 1-1: “Toon was ___” ........................................................................................................ 11
Figure 1-2: Jellinghaus’ (1892) map based on an interpretation of various word and
parable translations ........................................................................................................... 16
Figure 1-3: Te Winkel’s (1901) map based on an interpretation of two linguistic
questionnaires ..................................................................................................................... 16
Figure 1-4: Weijsen’s (1958) map based on 18 isophones and isomorphemes. ....................... 16
Figure 1-5: Daan and Blok’s (1969) map based on subjective judgements ......................... 16
Figure 1-6: The 267 dialect locations in the Dutch language area under investigation ......... 25
Figure 1-7: Distribution of the 267 Dutch dialects in the syntactic atlas ................................ 25
Figure 1-8: The provinces in the Dutch language area under investigation ....................... 25
Figure 1-9: SAND1 map 14b shows seven syntactic variables in the context of a
complementiser of a comparative if-clause. ........................................................................ 27
Figure 2-1: The Daan and Blok dialect map (reprinted from Daan and Blok, 1969) ............... 34
Figure 2-2: MDS map visualising syntactic distances with respect to complementisers ....... 40
Figure 2-3: MDS map visualising syntactic distances with respect to subject pronouns ........ 40
Figure 2-4: MDS map visualising syntactic distances with respect to reflexive and
reciprocal pronouns .......................................................................................................... 41
Figure 2-5: MDS map visualising syntactic distances with respect to fronting ................... 41
Figure 2-6: The SAND1 MDS dialect map based on a syntactic Hamming distance
measure ............................................................................................................................... 42
Figure 2-7: The Daan and Blok dialect map based on subjective judgements (see also Figure 2-1). ........................................................................................................................................... 42
Figure 3-1: The Daan and Blok map of the Dutch dialects based on subjective
judgements (reprinted from Daan and Blok, 1969) ................................................................ 52
Figure 3-2: The SAND1 map of the Dutch dialects based on a syntactic measure after
application of the Classical MDS procedure ........................................................................ 52
Figure 3-3: Map of the Dutch dialects based on pronunciation differences after
application of Kruskal’s Non-metric MDS procedure (reprinted from Heeringa, 2004) ......... 52
Figure 3-4: The selection of 21 dialect locations used in the regression analyses .................. 52
Figure 3-5: Geographical distances versus syntactic distances using the subset of 21
dialect locations shown in Figure 3-4 .................................................................................. 55
Figure 3-6: Geographical distances versus syntactic distances using all 267 dialect
locations .............................................................................................................................. 55
Figure 3-7: Geographical distances versus syntactic distances with respect to reflexives
using atomic variables ....................................................................................................... 60
Figure 3-8: Geographical distances versus syntactic distances with respect to reflexives
using feature variables ..................................................................................................... 60
Figure 4-1: Distribution of the 360 Dutch dialects in the RND atlas ....................................... 76
Figure 4-2: Distribution of the 267 Dutch dialects in the SAND atlas .................................. 76
Figure 4-3: Distribution of the 70 common Dutch dialects in the RND and SAND
atlases with the relevant province names .......................................................................... 76
Figure 4-4: Expert consensus map of the Dutch dialects (translated from De Schutter, 1994) ................................................................................................................................................. 76
Figure 4-5: Perceptual map of the Dutch dialects based on subjective judgements
(reprinted from Daan and Blok, 1969) .............................................................................. 77
Figure 4-6: Pronunciational MDS map of the Dutch dialects based on Levenshtein
distances ($r = 0.94$) ......................................................................................................... 77
Figure 4-7: Lexical MDS map of the Dutch dialects based on GIW distances ($r = 0.74$) ....... 77
Figure 4-8: Syntactic MDS map of the Dutch dialects based on GIW distances \( (r = 0.89) \) ...

Figure 4-9: Cronbach's alpha \( (\alpha) \) is a function of the number of linguistic variables \( (n_{var}) \) and the average inter-correlation value among the variables \( (r) \) ...

Figure 4-10: The average inter-correlation value \( (r) \) is based on all Pearson's correlation coefficients between each pair of variables \( (var, var_j) \) ...

Figure 4-11: This scatterplot shows the relation between pronunciational Levenshtein distances on the Y-axis and geographical distances on the X-axis ...

Figure 4-12: This scatterplot shows the relation between lexical GIW distances on the Y-axis and geographical distances on the X-axis ...

Figure 4-13: This scatterplot shows the relation between syntactic GIW distances on the Y-axis and geographical distances on the X-axis ...

Figure 4-14: Influences of geography underlying the associations between the linguistic levels as a percentage ...

Figure 5-1: Distribution of the 267 Dutch dialects in the Syntactic atlas ...

Figure 5-2: The provinces in the Dutch language area under investigation ...

Figure 5-3: This SAND1 sample marks the occurrences in seven dialects \( (1-7) \) of the four syntactic variables \( (A-D) \) in Table 5-1 to Table 5-4 ...

Figure 5-4: Symbolic representation of the SAND1 sample shown in Figure 5-3 ...

Figure 5-5: Calculation of the number of combinations with \( k=3 \) elements from the sample data set with \( n=4 \) variables ...

Figure 6-1: A perfect MDS dialect continuum map resulting from a 100% correlation between syntactic and geographical distances ...

Figure 6-2: An example of an MDS dialect mosaic map resulting from a low correlation between syntactic and geographical distances ...

Figure 6-3: Fragment of a feature variable hierarchy with respect to fronting phenomena ...

Figure 6-4: SAND1 MDS map visualising 485 syntactic variables in the aggregate based on a Hamming distance measure \( (r = 0.955) \) ...

Figure 6-5: Preliminary SAND2 MDS map visualising 497 syntactic variables in the aggregate based on a Hamming distance measure \( (r = 0.932) \) ...

Figure 6-6: Preliminary MDS map visualising 149 syntactic variables related to verbal clusters based on a Hamming distance measure \( (r = 0.894) \) ...

Figure 6-7: Preliminary MDS map visualising 231 variables related to morphosyntactic variation based on a Hamming distance measure \( (r = 0.879) \) ...

Figure 6-8: Preliminary MDS map visualising 180 syntactic variables related to negative concord and quantification phenomena based on a Hamming distance measure \( (r = 0.919) \) ...

Figure 6-9: SAND1 Hamming distances on the Y-axis versus geographical distances on the X-axis \( (r = 0.553) \) ...

Figure 6-10: SAND2 Hamming distances on the Y-axis versus geographical distances on the X-axis \( (r = 0.552) \) ...

Figure 6-11: SAND Hamming distances on the Y-axis versus geographical distances on the X-axis \( (r = 0.592) \) ...

Figure 6-12: SAND MDS map visualising 1182 syntactic variables in the aggregate based on a Hamming distance measure \( (r = 0.954) \) ...
