List of Tables and Figures

Tables

Table 2.1. Overview of indefinite, definite, demonstrative and possessive determiners in Dutch
Table 2.2. Overview of indefinite, definite, demonstrative and possessive determiners in English
Table 2.3. Overview of indefinite, definite, demonstrative and possessive determiners in French
Table 2.4. Overview of available determiner forms in Dutch, English and French
Table 2.5. Overview of personal, possessive and reflexive pronouns in Dutch
Table 2.6. Overview of demonstrative and relative pronouns and numerals in Dutch
Table 2.7. Overview of personal, possessive and reflexive pronouns in English
Table 2.8. Overview of personal, possessive and reflexive pronouns in French
Table 2.9. Overview of demonstrative and relative pronouns and numerals in French
Table 2.10. Appropriate and inappropriate morphosyntactic forms in Dutch, English and French for (specific) discourse-new reference according to the familiarity of the referent
Table 2.11. Appropriate, inappropriate and not optimal morphosyntactic forms for (specific) discourse-given reference in Dutch, English and French, according to the recency of mention of the referent
Table 4.1. Selected data per age point for Abel and input to Abel (Dutch)
Table 4.2. Selected data per age point for Matthijs and input to Matthijs (Dutch)
Table 4.3. Selected data per age point for Sarah and input to Sarah (Dutch)
Table 4.4. Mean length of utterances in words (MLUw) per age point for the Dutch child subjects and a comparison group
Table 4.5. Selected data per age point for Adam and input to Adam (English)
Table 4.6. Selected data per age point for Nina and input to Nina (English)
Table 4.7. Selected data per age point for Peter and input to Peter (English)
Table 4.8. Mean length of utterances in words (MLUw) per age point for the English child subjects and a comparison group

Table 4.9. Selected data per age point for Anne and input to Anne (French)

Table 4.10. Selected data per age point for Philippe and input to Philippe (French)

Table 4.11. Selected data per age point for Grégoire and input to Grégoire (French)

Table 4.12. Selected data per age point for Léa and input to Léa (French)

Table 4.13. Mean length of utterances in words (MLUw) per age point for the French child subjects and a comparison group

Table 4.14. Overview of raw number of analyzable person and object references (tokens) per child per age point in the child and input data

Table 4.15. Overview of coding categories of different types of nouns (with or without determiners) and pronouns

Table 5.1. Frequency of different types of bare nouns and nouns with different types of full determiners in raw numbers per age point (and as a percentage of the total number of nominal references per age point) for Abel and input to Abel (Dutch)

Table 5.2. Frequency of different types of bare nouns and nouns with different types of full determiners in raw numbers per age point (and as a percentage of the total number of nominal references per age point) for Matthijs and input to Matthijs (Dutch)

Table 5.3. Frequency of different types of bare nouns and nouns with different types of full determiners in raw numbers per age point (and as a percentage of the total number of nominal references per age point) for Sarah and input to Sarah (Dutch)

Table 5.4. Age points of earliest productive use in the data of different types of determiners per child (Dutch)

Table 5.5. Frequency of different types of bare nouns and nouns with different types of full determiners in raw numbers per age point (and as a percentage of the total number of nominal references per age point) for Adam and input to Adam (English)

Table 5.6. Frequency of different types of bare nouns and nouns with different types of full determiners in raw numbers per age point (and as a percentage of the total number of nominal references per age point) for Nina and input to Nina (English)

Table 5.7. Frequency of different types of bare nouns and nouns with different types of full determiners in raw numbers per age point (and as a percentage of the total number of nominal references per age point) for Peter and input to Peter (English)

Table 5.8. Age points of earliest productive use in the data of different types of determiners per child (English)

Table 5.9. Frequency of different types of bare nouns and nouns with different types of full determiners in raw numbers per age point (and as a percentage of the total number of nominal references per age point) for Anne and input to Anne (French)
Table 5.10. Frequency of different types of bare nouns and nouns with different types of full determiners in raw numbers per age point (and as a percentage of the total number of nominal references per age point) for Grégoire and input to Grégoire (French)

Table 5.11. Frequency of different types of bare nouns and nouns with different types of full determiners in raw numbers per age point (and as a percentage of the total number of nominal references per age point) for Léa and input to Léa (French)

Table 5.12. Frequency of different types of bare nouns and nouns with different types of full determiners in raw numbers per age point (and as a percentage of the total number of nominal references per age point) for Philippe and input to Philippe (French)

Table 5.13. Age points of earliest productive use in the data of different types of determiners per child (French)

Table 5.14. Overview of the age points of earliest productive use in the data of different types of determiners per child (Dutch, English and French)

Table 5.15. Frequency of bare nouns and nouns with a determiner in the input per language as a percentage of the total number of nominal references per language (and in raw figures)

Table 5.16. Frequency of proper names and different types of (third person) pronouns in raw numbers per age point (and as a percentage of the total number of pronouns per age point) for Abel and input to Abel (Dutch)

Table 5.17. Frequency of proper names and different types of (third person) pronouns in raw numbers per age point (and as a percentage of the total number of pronouns per age point) for Matthijs and input to Matthijs (Dutch)

Table 5.18. Frequency of proper names and different types of (third person) pronouns in raw numbers per age point (and as a percentage of the total number of pronouns per age point) for Sarah and input to Sarah (Dutch)

Table 5.19. Age points of earliest productive use in the data of proper names and different types of (third person) pronouns per child (Dutch)

Table 5.20. Frequency of proper names and different types of (third person) pronouns in raw numbers per age point (and as a percentage of the total number of pronouns per age point) for Adam and input to Adam (English)

Table 5.21. Frequency of proper names and different types of (third person) pronouns in raw numbers per age point (and as a percentage of the total number of pronouns per age point) for Nina and input to Nina (English)

Table 5.22. Frequency of proper names and different types of (third person) pronouns in raw numbers per age point (and as a percentage of the total number of pronouns per age point) for Peter and input to Peter (English)

Table 5.23. Age points of earliest productive use in the data of proper names and different types of (third person) pronouns per child (English)
Table 5.24. Frequency of proper names and different types of (third person) pronouns in raw numbers per age point (and as a percentage of the total number of pronouns per age point) for Anne and input to Anne (French)

Table 5.25. Frequency of proper names and different types of (third person) pronouns in raw numbers per age point (and as a percentage of the total number of pronouns per age point) for Grégoire and input to Grégoire (French)

Table 5.26. Frequency of proper names and different types of (third person) pronouns in raw numbers per age point (and as a percentage of the total number of pronouns per age point) for Léa and input to Léa (French)

Table 5.27. Frequency of proper names and different types of (third person) pronouns in raw numbers per age point (and as a percentage of the total number of pronouns per age point) for Philippe and input to Philippe (French)

Table 5.28. Age points of earliest productive use in the data of proper names and different types of (third person) pronouns per child (French)

Table 5.29. Overview of the age points of earliest productive use in the data of proper names and different types of (third person) pronouns per child (Dutch, English and French)

Table 6.1. Frequency of pragmatically non-analyzable references per age point as a percentage of the total number of morphosyntactically analyzable references per age point (and in raw figures) for Abel and input to Abel (Dutch)

Table 6.2. Frequency of pragmatic functions per age point as a percentage of the total number of pragmatically analyzable references per age point (and in raw figures) for Abel and input to Abel (Dutch)

Table 6.3. Frequency of pragmatically non-analyzable references per age point as a percentage of the total number of morphosyntactically analyzable references per age point (and in raw figures) for Matthijs and input to Matthijs (Dutch)

Table 6.4. Frequency of pragmatic functions per age point as a percentage of the total number of pragmatically analyzable references per age point (and in raw figures) for Matthijs and input to Matthijs (Dutch)

Table 6.5. Frequency of pragmatically non-analyzable references per age point as a percentage of the total number of morphosyntactically analyzable references per age point (and in raw figures) for Sarah and input to Sarah (Dutch)

Table 6.6. Frequency of pragmatic functions per age point as a percentage of the total number of pragmatically analyzable references per age point (and in raw figures) for Sarah and input to Sarah (Dutch)

Table 6.7. Frequency of pragmatically non-analyzable references per age point as a percentage of the total number of morphosyntactically analyzable references per age point (and in raw figures) for Adam and input to Adam (English)
Table 6.8. Frequency of pragmatic functions per age point as a percentage of the total number of pragmatically analyzable references per age point (and in raw figures) for Adam and input to Adam (English)  

Table 6.9. Frequency of pragmatically non-analyzable references per age point as a percentage of the total number of morphosyntactically analyzable references per age point (and in raw figures) for Nina and input to Nina (English)  

Table 6.10. Frequency of pragmatic functions per age point as a percentage of the total number of pragmatically analyzable references per age point (and in raw figures) for Nina and input to Nina (English)  

Table 6.11. Frequency of pragmatically non-analyzable references per age point as a percentage of the total number of morphosyntactically analyzable references per age point (and in raw figures) for Peter and input to Peter (English)  

Table 6.12. Frequency of pragmatic functions per age point as a percentage of the total number of pragmatically analyzable references per age point (and in raw figures) for Peter and input to Peter (English)  

Table 6.13. Frequency of pragmatically non-analyzable references per age point as a percentage of the total number of morphosyntactically analyzable references per age point (and in raw figures) for Anne and input to Anne (French)  

Table 6.14. Frequency of pragmatic functions per age point as a percentage of the total number of pragmatically analyzable references per age point (and in raw figures) for Anne and input to Anne (French)  

Table 6.15. Frequency of pragmatically non-analyzable references per age point as a percentage of the total number of morphosyntactically analyzable references per age point (and in raw figures) for Grégoire and input to Grégoire (French)  

Table 6.16. Frequency of pragmatic functions per age point as a percentage of the total number of pragmatically analyzable references per age point (and in raw figures) for Grégoire and input to Grégoire (French)  

Table 6.17. Frequency of pragmatically non-analyzable references per age point as a percentage of the total number of morphosyntactically analyzable references per age point (and in raw figures) for Léa and input to Léa (French)  

Table 6.18. Frequency of pragmatic functions per age point as a percentage of the total number of pragmatically analyzable references per age point (and in raw figures) for Léa and input to Léa (French)  

Table 6.19. Frequency of pragmatically non-analyzable references per age point as a percentage of the total number of morphosyntactically analyzable references per age point (and in raw figures) for Philippe and input to Philippe (French)  

Table 6.20. Frequency of pragmatic functions per age point as a percentage of the total number of pragmatically analyzable references per age point (and in raw figures) for Philippe and input to Philippe (French)
Table 7.1. Use of nouns and determiners for pragmatic functions in the input as a percentage of the total number of forms per function per language (and in raw figures)  
Table 7.2. Overview of associations of nouns with an indefinite, definite/demonstrative or possessive determiner with pragmatic functions in the Dutch, English and French input  
Table 7.3. Use of nouns without a determiner and nouns with a determiner for pragmatic functions in child Dutch as a percentage of the total number of forms per function per age point (and in raw figures)  
Table 7.4. Use of nouns without a determiner and nouns with a determiner for pragmatic functions in child English as a percentage of the total number of forms per function per age point (and in raw figures)  
Table 7.5. Use of nouns without a determiner and nouns with a determiner for pragmatic functions in child French as a percentage of the total number of forms per function per age point (and in raw figures)  
Table 7.6. Use of nouns and determiners for pragmatic functions in child Dutch as a percentage of the total number of forms per function per age point (and in raw figures) and corresponding results for the Dutch input  
Table 7.7. Use of nouns and determiners for pragmatic functions in child English as a percentage of the total number of forms per function per age point (and in raw figures) and corresponding results for the English input  
Table 7.8. Overview of age points at which the percentage of realized determiners in obligatory contexts is comparable across languages  
Table 7.9. Use of nouns and determiners for pragmatic functions in child Dutch (3;3, determiner production rate 79%) and child French (2;3, determiner production rate 84%) as a percentage of the total number of forms per function per age point/language (and in raw figures)  
Table 7.10. Use of nouns and determiners for pragmatic functions in child Dutch (3;3, determiner production rate 85%) and child French (2;3, determiner production rate 84%) as a percentage of the total number of forms per function per age point/language (and in raw figures)  
Table 7.11. Use of nouns and determiners for pragmatic functions in child English (3;0, determiner production rate 85%) and child French (2;6, determiner production rate 91%) as a percentage of the total number of forms per function per age point/language (and in raw figures)  
Table 7.12. Use of nouns and determiners for pragmatic functions in child Dutch (2;9, determiner production rate 66%) and child English (2;6, determiner production rate 68%) as a percentage of the total number of forms per function per age point/language (and in raw figures)
Table 7.14. Use of nouns and determiners for pragmatic functions in child Dutch (3;3, determiner production rate 79%) and child English (3;0, determiner production rate 85%) as a percentage of the total number of forms per function per age point/language (and in raw figures)

Table 7.15. Use of nouns and determiners for pragmatic functions for the three English-speaking children separately when their determiner production rate is around 87% as a percentage of the total number of forms per function per child (and in raw figures)

Table 7.16. Use of nouns and determiners for pragmatic functions for three French-speaking children separately when their determiner production rate is around 94% as a percentage of the total number of forms per function per child (and in raw figures)

Table 7.17. Overview of the frequency of pragmatic functions relevant to determiner use in the input per language as a percentage of all pragmatic functions relevant to determiner use in the input per language (100%)

Table 8.1. Use of pronouns, nouns and proper names for pragmatic functions in the input as a percentage of the total number of forms per function per language (and in raw figures)

Table 8.2. Use of different types of pronouns for pragmatic functions in the input as a percentage of the total number of forms per function per language (and in raw figures)

Table 8.3. Use of pronouns, nouns and proper names for pragmatic functions in child Dutch as a percentage of the total number of forms per function per age point (and in raw figures) and corresponding results for the Dutch input

Table 8.4. Use of different types of pronouns for pragmatic functions in child Dutch as a percentage of the total number of forms per function per age range (and in raw figures) and corresponding results for the Dutch input

Table 8.5. Use of pronouns, nouns and proper names for pragmatic functions in child English as a percentage of the total number of forms per function per age point (and in raw figures) and corresponding results for the English input

Table 8.6. Use of different types of pronouns for pragmatic functions in child English as a percentage of the total number of forms per function per age point (and in raw figures) and corresponding results for the English input

Table 8.7. Use of pronouns, nouns and proper names for pragmatic functions in child French as a percentage of the total number of forms per function per age point (and in raw figures) and corresponding results for the French input

Table 8.8. Use of different types of pronouns for pragmatic functions in child French as a percentage of the total number of forms per function per age point (and in raw figures) and corresponding results for the French input

Table 8.9. Comparison of the frequency of different types of pronouns for pragmatic functions in child Dutch, English and French for the age range 2;0-2;6 as a percentage of the total
number of forms per function per language

Table 8.10. Comparison of the frequency of different types of pronouns for pragmatic functions in child Dutch, English and French for the age range 2;9-3;3 as a percentage of the total number of forms per function per language

Table 8.11. Overview of the frequency of pragmatic functions relevant to pronoun use in the input per language as a percentage of all pragmatic functions relevant to pronoun use in the input per language (100%)

Table 9.1. Overview of age range of earliest productive use of pronouns, determiners and proper names in child Dutch, English and French

Table 9.2. Overview of the age of earliest sensitivity to pragmatic factors in determiner use in child Dutch, English and French

Table 9.3. Overview of the age of earliest sensitivity to pragmatic factors in pronoun use in child Dutch, English and French

Table 9.4. Overview of the influence of cue frequency and cue consistency on the acquisition of determiner use for discourse-new-nmr and determiner and pronoun use for discourse-given reference in child Dutch, English and French

Table 9.5. Overview of the age of earliest sensitivity and age of adult-like avoidance of inappropriate forms for the pragmatic factor/function of new/given in child Dutch, English and French

Figures

Figure 2.1. Overview of pragmatic functions of referents in discourse related to the pragmatic factors specificity, givenness and familiarity.

Figure 2.2. Continuum of referential expressions according to the cognitive status of the referent

Figure 4.1. Pragmatic functions analyzed in the child and input data

Figure 5.1. Percentage of use of determiners and fillers in obligatory morphosyntactic contexts per child per age point (Dutch)

Figure 5.2. Percentage of use of determiners and fillers in obligatory morphosyntactic contexts per child per age point (English)

Figure 5.3. Percentage of use of determiners and fillers in obligatory morphosyntactic contexts per child per age point (French)

Figure 5.4. Cross-linguistic comparison of the percentage of use of determiners and fillers in obligatory morphosyntactic contexts per age point in child Dutch, English and French

Figure 7.1. Cross-linguistic comparison of the percentage of use of determiners and fillers in obligatory morphosyntactic contexts per age point in child Dutch, English and French

Figure 8.1. Use of nouns for discourse-given-maintenance in child Dutch, English and French as a
percentage of the total number of forms for maintenance per age point per language and a corresponding result for the Dutch, English and French input combined

Figure 9.1. Cross-linguistic comparison of the percentage of use of determiners and fillers in obligatory morphosyntactic contexts per age point in child Dutch, English and French

Figure 9.2. Use of nouns for discourse-given-maintenance in child Dutch, English and French as a percentage of the total number of forms for maintenance per age point per language and a corresponding result for the Dutch, English and French input combined
