Negative concord in English and Romance: syntax-morphology interface conditions on the expression of negation
Tubau Muntañá, S.

Citation for published version (APA):
Acknowledgements

Many people have contributed to this dissertation in many different ways throughout the years it has been in preparation. In this section I would like to thank them all, although this is a somehow utopic task, for it seems inevitable that some names might be unfairly forgotten.

Let me try to do my best by first thanking Prof. Dr. Josep Quer, my supervisor at the University of Amsterdam, who, despite the physical distance, has managed to be always there, providing enlightenment at crucial moments of the process and making every effort to meet deadlines and suit my needs. The balanced combination of attention and freedom that he has provided me with throughout the process of elaboration of this dissertation has certainly turned the burden of writing up my ideas on Negative Concord into a gezellig experience that I really enjoyed.

I would also like to thank Dr. Mireia Llinàs Grau, my supervisor at the Universitat Autònoma de Barcelona, who provided me with feedback and reading material, helped me with the technicalities of the defense and offered lots of moral support, encouragement and good advice.

I should also express my gratitude to my colleagues and administrative staff in the Departament de Filologia Anglesa i de Germanística for making it easy for me to combine research and teaching during the last four years. Likewise, Silvia Martínez Ferreiro, Laura Gimeno, Andrea Pearman, Raquel Serrano, Maria Sabaté and Elisabet Pladevall, all former or current Ph.D. students, must be thanked for sharing with me the intricacies of a doctorand’s daily life.

Heartfelt thanks to Professor Bernd Kortmann, from the Albert-Ludwigs Universität Freiburg, in Germany, who agreed to host me for a three-month-research stay in the Anglistik Seminar. Without his permission to use the FRED corpus of English dialects, the present dissertation would have not been possible. I am also grateful to Melitta Cocan, Professor Kortmann’s secretary, who intensively helped me finding a nice place to live in Freiburg.

Special thanks go to Lieselotte Anderwald, Benedikt Szmrecsany and Lars Hindriks for making me feel at home during my stay in Freiburg, as well as for interesting conversations over cups of Milchkaffee and glasses of Hefe-weissbier. Thanks also to Susanne Wagner, Verena Haser and the Hi-Wis (Johanna, Cara and Anna) for being part of my German social life.

Parts of this dissertation have also greatly benefited from the feedback of Ad Neeleman and Hans van de Koot, who kindly agreed to discuss my work during a three-week research stay at University College London. Likewise, I would like to thank the participants in the Workshop on Concord Phenomena, in ESSLI’06, the
Workshop on Negation, held at the Karls-Eberhard Universität Tübingen, the Formal Approaches to Variation in Syntax conference held at the University of York and the 17th Colloquium of Generative Grammar for providing me with useful comments and suggestions, for sending material or for both. Some names that can be singled out are the following: Karlos Arregi, Theresa Biberauer, Lisa Green, Andrew Nevins, Rolf Noyer, Jeffrey Parrott, Doris Penka, Arnim von Stechow, Raffaella Zanuttini and Hedde Zeijlstra.

The audiences of the seminar organised by the Centre de Lingüística Teòrica, at the Universitat Autònoma de Barcelona, of the ACLC seminar and the bi-weekly meetings of the Encoding Grammatical Information research group, both at the University of Amsterdam and of the M.U.S.T seminar at the University of Utrecht have also been crucial in providing me with feedback on the ideas developed in the present dissertation. I am particularly indebted to Suzanne Aalberse, Anna Bartra, Josep Maria Brucart, Hans den Besten, Teresa Cabrè, Olga Fischer, Maria Lluïsa Hernanz, Olaf Koeneman, Joan Mascaró, Roland Pfau, Carme Picallo, Gemma Rigau, Johan Rooryck, Petra Sleeman, Jaume Solà, Marjo van Koppen, Luis Vicente, Fred Weerman and Hedde Zeijlstra (once more) for providing me with useful feedback and/or relevant material/data on the issue of negation.

I am also very grateful to Maria Teresa Espinal, Ángel Gallego and Eulàlia Bonet, who have kindly agreed to discuss parts of my work.

Outside the academic environment, I am thankful to the group of Agronomical Engineers (Montse, Joan, Anna Pedró, Anna Biau, Pitu, Laia, Mateu, Marc and Andreu) who spiced up my life with dinners, parties and excursions while I was living in Lleida, and to my friends Martina, Montse, Eduard and the rest of Quintaneros: despite not having seen each other as often as I would have wanted during these years, I knew they were there.

My final words of gratitude are devoted to my family, especially my parents, who have always stood by me in all stages of my academic and personal life. I appreciate their logistic help and support during the last six months: it has been decisive for the completion of this dissertation. Moltes gràcies!

Last but not least, I want to thank Jaume, my partner, for loving me, taking care of me and stoically listening to rather lengthy theoretical explanations on linguistics, syntax and negation. Gràcies per tot!
