Triacylglycerol structures and the chocolate fat bloom mechanism
van Mechelen, J.B.

Citation for published version (APA):
van Mechelen, J. B. (2008). Triacylglycerol structures and the chocolate fat bloom mechanism
Chapter 3  Structures of mono-unsaturated triacylglycerols Part II  49
The $\beta_2$ polymorph
3.1 Abstract  50
3.2 Introduction  50
3.3 Experimental methods
  3.3.1 Samples, sample preparation and data collection  51
  3.3.2 Indexing, model building, structure determination and refinement  52
3.4 Results and discussion
  3.4.1 Data collection  54
  3.4.2 Anisotropic cell-parameter contraction  56
  3.4.3 The novel $\beta_2$-POS and $\beta_2$-SOA polymorphs  57
  3.4.4 Indexing, structure determination and refinement of the $\beta_2$ polymorphs  58
3.5 The novel $\beta_2$ polymorph crystal structure model
  3.5.1 Conformation of TAGs  59
  3.5.2 Built-up and stacking of 'three packs'  60
  3.5.3 Subcell  60
  3.5.4 Fingerprint area interpretation  61
  3.5.5 Methyl end-plane packing and melting points  62
  3.5.6 The $\beta_2$ to $\beta_1$ phase transition  63
3.6 Conclusions  65
3.7 Acknowledgements  66
3.8 References  66
3.9 Appendix  Rietveld refinement results of $\beta_2$ structures  68

Chapter 4  Structures of mono-unsaturated triacylglycerols Part III  71
The $\beta_2$ polymorphs of trans-mono-unsaturated triacylglycerols, and related fully saturated triacylglycerols
4.1 Abstract  72
4.2 Introduction  72
4.3 Experimental
  4.3.1 Samples, sample preparation and data collection  73
  4.3.2 Indexing, model building, structure determination and refinement  74
4.4 Results and discussion
  4.4.1 Packing of the $\beta_2$ TAGs  78
  4.4.2 The methyl end-plane  82
  4.4.3 The packing of LMM and PSS  86
  4.4.4 The problem of local minima  87
4.5 Conclusions  89
Chapter 5 Structures of mono-unsaturated triacylglycerols Part IV

The highest melting $\beta''$-2 polymorphs of trans-mono-unsaturated triacylglycerols and related TAGs and their polymorphic stability

5.1 Abstract 100
5.2 Introduction 100
5.3 Experimental 102
  5.3.1 Samples, sample preparation and data collection 102
  5.3.2 Indexing, model building, structure determination and refinement 103
5.4 Results and discussion 107
  5.4.1 The structure determination process 107
    5.4.1.1 $\beta''_1$-2 PEP, $\beta''_1$-2 PSP, $\beta''_1$-2 PPE and $\beta''_1$-2 PPS 107
    5.4.1.2 $\beta''_0$-2 PSS 108
  5.4.2 The role of temperature in the interpretation of XRPD patterns 109
  5.4.3 Phase transitions and stability of polymorphs 111
    5.4.3.1 The $\alpha$→$\beta''_2$ Phase transition 111
    5.4.3.2 The $\beta''_2$→$\beta''_1$ phase transition 112
    5.4.3.3 Stability of $\beta''_1$-2 112
    5.4.3.4 $\beta''_0$-2 PSS 114
  5.4.4 Packing and methyl end-plane 115
    5.4.4.1 $\beta''_1$-2 PEP, $\beta''_1$-2 PSP, $\beta''_1$-2 PPE and $\beta''_1$-2 PPS 115
    5.4.4.2 $\beta''_0$-2 PSS 118
  5.4.5 Comparison of $\beta'$ structures 119
  5.4.6 Comparison of $\beta'$ and the $\beta$ structures 121
5.5 Conclusions 121
5.6 Acknowledgements 123
5.7 References 123
5.8 Appendix Rietveld refinement results of $\beta''$-2 structures 125
