Contents

Dankwoord	vii
1 Introduction, outline and preliminaries	1
1.1 Introduction and outline	1
1.2 Preliminaries on Markov Decision Problems	6
1.3 One-step policy improvement approach	16
I Production-Inventory management of perishables	21
2 Perishable inventory theory	23
2.1 Problem of interest	24
2.2 Common issuing and ordering policies	29
2.3 History of production-inventory models	33
2.4 Classification of perishable inventory studies	38
2.5 Blood platelet pool studies	60
2.6 Research questions	63
3 A combined SDP-Simulation approach	65
3.1 Approach	66
3.2 Step 1 – MDP formulation	67
3.3 Step 2 – Scaling and Solving	74
3.4 Step 3 – Search for simple rules in MDP policy	83
3.5 Step 4 – Performance of rules versus MDP policy	96

3.6	Step 5 – Re-scaling and validation of simple rule	98
3.7	Sensitivity analysis for the PPP	109
3.8	Discussion and Conclusions	117
4	Extended SDP-Simulation approach	123
4.1	Introduction	123
4.2	Extended SDP-Simulation approach	125
4.3	Case study – optimal policy around breaks	131
4.4	The hospital case with no order costs	144
4.5	The hospital case with fixed order costs	151
4.6	Summary and conclusions	158
II	Dynamic control of Traffic Lights	161
5	Introduction and outline of Part II	163
5.1	Three traffic light problems of interest	164
5.2	Studies on control of traffic lights	167
5.3	Studies on Decomposition & One-step policy improvement	176
5.4	Conclusion	180
6	Single intersection in isolation	181
6.1	Modeling the problem at a single intersection	181
6.2	Formulation as a Markov Decision Problem	187
6.3	One-step policy improvement (RV1)	195
6.4	Test cases and results	206
6.5	More-advanced improvement rules	219
6.6	Evaluation of advanced RV policies	225
6.7	Conclusions and Discussion	230

7	Single intersection with arrival information	235
7.1	The control problem with arrival information	235
7.2	One-step policy improvement of FC	237
7.3	The simulation model	245
7.4	Base cases and results	249
7.5	Sensitivities	252
7.6	Conclusions	258
8	Networks of intersections	259
8.1	Introduction	259
8.2	One-step policy improvement for network control	260
8.3	Optimization of coordinated FC	263
8.4	Simulation model for networks	270
8.5	Study I – I2F4C2 arterial	273
8.6	Study II – Progression along arterial	284
8.7	Study III and IV – More arterials	289
8.8	Study V – Network of 9 intersections (I3x3F4C2)	297
8.9	Conclusions	303
9	Epilogue	305
	Appendices	310
A	Abbreviations, notations and conventions	311
B	Relative values in periodic MCs	313
C	Simulation-based search for order-up-to levels	315
C.1	Ordinary order-up-to S rule	316
C.2	2D-order-up-to S rule	317

D Optimization of fixed cycle	319
D.1 Determining the minimal cycle length	319
D.2 Incremental search	320
E Extrapolating tabulated functions	323
E.1 1-dimensional tabulated functions	323
E.2 n -dimensional tabulated functions	327
Bibliography	328
Summary in English	345
Nederlandse samenvatting (Summary in Dutch)	351
