Disclaimer/Complaints regulations

If you believe that digital publication of certain material infringes any of your rights or (privacy) interests, please let the Library know, stating your reasons. In case of a legitimate complaint, the Library will make the material inaccessible and/or remove it from the website. Please Ask the Library: <http://uba.uva.nl/en/contact>, or a letter to: Library of the University of Amsterdam, Secretariat, Singel 425, 1012 WP Amsterdam, The Netherlands. You will be contacted as soon as possible.

Contents

1	Introduction	1
1.1	Historic perspective	1
1.1.1	Conception of Bose-Einstein condensation	2
1.1.2	Technological advances	3
1.2	Cooling and trapping of neutral atoms	4
1.3	Atom chips	5
1.4	The <i>Celsius</i> experiment	6
1.5	This thesis	7
2	Theoretical background	9
2.1	Introduction	9
2.2	Magnetic trapping	9
2.2.1	Basic principles	9
2.2.2	Atom-chip magnetic traps	11
2.2.3	Realistic trapping fields	13
2.3	Radio-frequency dressed potentials	16
2.3.1	The rf-dressed potential	17
2.3.2	RF magnetic field	19
2.3.3	Character of the rf-dressed potential	21
2.4	Electrostatic manipulation	22
2.5	Properties of trapped ultracold gases	23
2.5.1	In-trap longitudinal density distributions	23
3	Atom chip fabrication and characterization	25
3.1	Introduction	25
3.2	Design considerations	25
3.3	Fabrication protocol	27
3.4	Wire pattern design	30
3.5	Wire characterization	32
3.5.1	Thickness and surface properties	32
3.5.2	Chip wire resistance	34
3.5.3	Inter chip wire resistance	35
3.5.4	Magnetic potential roughness	36
3.5.5	Thermal properties	38
3.5.6	Chip wire breakdown	41
3.6	Summary and conclusion	43

4	Experimental setup	45
4.1	Introduction	45
4.2	Overview of the experiment	46
4.2.1	Vacuum system	46
4.2.2	Magnetic field coils	47
4.2.3	Lasers	49
4.2.4	Atom chip mount	49
4.2.5	Dispenser	50
4.2.6	Absorption imaging system	51
4.3	Experiment automation	51
4.3.1	Computer control hardware	51
4.3.2	Computer control software	53
4.4	DDS rf generation	57
4.4.1	Introduction	57
4.4.2	Hardware configuration	57
4.4.3	Programming	58
4.4.4	Radio-frequency signal characteristics	62
4.5	Experimental cycle — trapping and cooling sequence	63
4.6	Summary	65
5	Longitudinal character of atom-chip-based rf-dressed potentials	67
5.1	Introduction	68
5.2	Radio frequency dressed potentials	69
5.3	Experimental setup	71
5.4	Experimental results	73
5.4.1	Effect of magnetic field variations	73
5.4.2	Longitudinal dipole oscillations	76
5.4.3	Beam-splitters for Bose-Einstein condensates	79
5.5	Summary and Conclusion	82
6	Matter-wave interference	85
6.1	Introduction	85
6.2	Background information	86
6.2.1	Interfering atoms	86
6.2.2	The interference pattern	87
6.2.3	The phase of the macroscopic wave function	88
6.2.4	Properties of the double-well potential	89
6.3	Experimental optimization	90
6.3.1	General procedure	90
6.3.2	Bare-trap dynamics after switch-off of the rf dressing	91
6.3.3	Spin distribution	93
6.4	Matter-wave interference	95
6.5	Summary and outlook	101

A The rf-dressed potential	103
References	106
Summary	123
Samenvatting	125
Dankwoord	129
Publication list	131
