Contents

Introduction v

I Superstring Theory 1

1 Type IIA and Type IIB Superstring Theory 5
  1.1 The World-Sheet Action 5
  1.1.1 Canonical Quantisation 6
  1.1.2 Massless Spectrum 8
  1.1.3 T-Duality 12
  1.2 Low Energy Effective Action 15
    1.2.1 Supergravity Theory in Eleven and Ten Dimensions 15
    1.2.2 Couplings of String Theory 17
  1.3 Non-Perturbative Aspects 20
    1.3.1 M-theory 20
    1.3.2 Branes 21
    1.3.3 D-brane World-Volume Action 29
    1.3.4 Gauge/Gravity Correspondence 32
    1.3.5 S-duality 34

II String Compactification 41

2 Calabi-Yau Compactifications 45
  2.1 (2,2) Superconformal Field Theory 45
    2.1.1 \( \mathcal{N} = 2 \) Superconformal Algebra 46
    2.1.2 Chiral Ring 47
    2.1.3 Spectral Flow 51
2.1.4 Topological String Theory ............................................. 52
2.1.5 Elliptic Genus and Vector-Valued Modular Forms ............... 56
2.1.6 Mirror Symmetry and Non-perturbative Effects .................. 60

2.2 Spacetime Physics ............................................................... 61
2.2.1 Moduli Space and Special Geometry ................................. 61
2.2.2 Four- and Five-Dimensional Low Energy Supergravity Theory .... 68
2.2.3 Range of Validity and Higher Order Corrections ................. 76

3 K3 Compactification ................................................................. 79
3.1 (4,4) Superconformal Field Theory .......................................... 79
3.2 Moduli Space of K3 ............................................................... 81
3.3 Four-Dimensional Theories and Heterotic String Dualities ........... 83
  3.3.1 $\mathcal{N} = 4, d = 4$ Supergravity ................................. 84
  3.3.2 Heterotic String Dualities ................................................. 86

III Multi-Holes and Bubbling Solutions ........................................ 89

4 Black Holes and Multi-Holes .................................................... 93
4.1 General Stationary Solutions ................................................. 93
4.2 Extremal Black Holes and Attractor Mechanism .......................... 96
4.3 Properties of Multi-holes ..................................................... 98
  4.3.1 Walls of Marginal Stability .............................................. 99
  4.3.2 Angular Momentum of the Spacetime ................................. 101
  4.3.3 Split Attractor Flow ..................................................... 102
4.4 In Coordinates ................................................................. 102

5 More Bubbling Solutions ......................................................... 107
5.1 Introduction ................................................................. 107
5.2 The Lift of Multi-Center Solutions ....................................... 110
5.3 Construct the Bubbling Solutions ........................................ 111
  5.3.1 M-theory Limit ............................................................ 111
  5.3.2 Rescale the Solution .................................................... 112
  5.3.3 Specify the 4D Charges ................................................ 115
5.4 The Properties of the Solution ........................................... 116
