Contents

1 Introduction ........................................ 1
  1.1 Basic definitions and terminology ..................... 3
  1.2 Thesis outline .................................... 8

2 Space-Mapping Review .................................. 11
  2.1 Introduction ...................................... 11
  2.2 Space-Mapping optimization .......................... 12
      2.2.1 The space-mapping function .................... 13
      2.2.2 Space-Mapping approaches ....................... 15
      2.2.3 Space-Mapping algorithms ......................... 17
  2.3 Perfect mapping, flexibility and reachability .......... 20
  2.4 Constrained optimization with space mapping .......... 23
  2.5 Defect correction and space mapping ................... 25
      2.5.1 The defect correction principle ................. 25
      2.5.2 Defect correction and space mapping ............. 27
      2.5.3 Defect correction in optimization ................. 28
      2.5.4 Improving space mapping ......................... 34
  2.6 Simple examples and counterexamples ................... 35
  2.7 Conclusions ................................... 41

3 The Manifold-Mapping Technique ........................ 43
  3.1 Introduction ..................................... 43
  3.2 Manifold-Mapping algorithms ......................... 44
      3.2.1 Original manifold mapping ....................... 44
      3.2.2 Manifold mapping ................................ 46
      3.2.3 Generalized manifold mapping .................... 47
  3.3 Algorithm extensions ................................ 48
      3.3.1 Trust-Region manifold mapping ................... 48
      3.3.2 Constrained optimization with manifold mapping ... 50
  3.4 Further considerations ................................ 50
      3.4.1 Multi-Level optimization ......................... 51
### Contents

3.4.2 Different dimensions of the design spaces .......... 60
3.5 Conclusions ........................................... 62

4 Manifold-Mapping Analysis 65
4.1 Introduction ........................................... 65
4.2 Consistency ............................................ 66
   4.2.1 Original manifold-mapping algorithm .......... 67
   4.2.2 Manifold-Mapping algorithm .................. 70
   4.2.3 Generalized manifold-mapping algorithm .... 71
4.3 Convergence ........................................... 71
   4.3.1 Manifold-Mapping algorithm .................. 72
   4.3.2 Original manifold-mapping algorithm ....... 75
   4.3.3 Generalized manifold-mapping algorithm .... 76
4.4 Examples .............................................. 77
   4.4.1 Linear and superlinear convergence .......... 77
   4.4.2 Different types of linear convergence ....... 79
   4.4.3 TRMM convergence ................................ 80
4.5 Conclusions ............................................ 82

5 Practical Applications I: Optimization with Inexpensive Constraints 85
5.1 Introduction ........................................... 85
5.2 Finite-Element based applications ..................... 86
   5.2.1 A C-shaped circuit (EPE1) ...................... 86
   5.2.2 A coreless actuator (EPE2) ..................... 90
   5.2.3 An automotive actuator (EPE25) ............... 95
5.3 A design problem in photon transmission .............. 98
5.4 Conclusions ............................................ 102

6 Practical Applications II: Optimization with Expensive Constraints 105
6.1 Introduction ........................................... 105
6.2 Electro-Magnetic actuator designs ..................... 106
   6.2.1 A cylindrical voice-coil actuator (EPE3) .... 106
   6.2.2 A rectangular voice-coil actuator (EPE4) ..... 113
6.3 Electronic designs .................................... 115
   6.3.1 A digital inverter (ASCO1) .................... 115
   6.3.2 A class-E power amplifier (ASCO2) ........... 118
   6.3.3 A three-stage operational amplifier (ASCO3) .. 120
6.4 Conclusions ............................................ 122

Summary ..................................................... 125
