Defining the meiotic recombination landscape in tomato

Jihed Chouaref

Defining the meiotic recombination landscape in
tomato

Jihed Chouaref

The work described in this thesis was made possible thanks to the generous support of the European Commission Seventh Framework-PEOPLE-2013 to the ITN project COMREC, GA-606956. (Control Of Meiotic RECombination).

The author also thanks the University of Amsterdam for financing the 4th year of the PhD project.

Defining meiotic recombination landscape in tomato

ACADEMISCH PROEFSCHRIFT

ter verkrijging van de graad van doctor
aan de Universiteit van Amsterdam
op gezag van de Rector Magnificus
prof. dr. ir. K.I.J. Maex

ten overstaan van een door het College voor Promoties ingestelde commissie,
in het openbaar te verdedigen in de Agnietenkapel
op donderdag 3 juni 2021, te 10.00 uur

door Jihed Chouaref
geboren te Lyon

Promotiecommissie

<i>Promotor:</i>	prof. dr. R.E. Koes	Universiteit van Amsterdam
<i>Copromotor:</i>	dr. ir. P.F. Fransz	Universiteit van Amsterdam
<i>Overige leden:</i>	prof. dr. J.H.S.G.M. de Jong	Wageningen University & Research
	dr. ir. S.A. Peters	Wageningen University & Research
	prof. dr. H.V. Westerhoff	Universiteit van Amsterdam
	prof. dr. M.A. Haring	Universiteit van Amsterdam
	dr. P.M. Bleeker	Universiteit van Amsterdam

Faculteit der Natuurwetenschappen, Wiskunde en Informatica

"I leave Sisyphus at the foot of the mountain. One always finds one's burden again. But Sisyphus teaches the higher fidelity that negates the gods and raises rocks. He too concludes that all is well. This universe henceforth without a master seems to him neither sterile nor futile. Each atom of that stone, each mineral flake of that night-filled mountain, in itself forms a world. The struggle itself toward the heights is enough to fill a man's heart. One must imagine Sisyphus happy."

Albert Camus, *The Myth of Sisyphus*

Contents

1 Introduction	1
Factors shaping the meiotic recombination landscape and tools to analyze crossovers	1
A brief overview of the meiotic pathways	3
Factors influencing the meiotic recombination landscape	5
A chromosome-scale control of meiotic recombination events density	5
Chromosome axes shape the recombination landscape	7
Nucleosome occupancy shapes the recombination landscape	10
The DNA methylation pattern shapes the recombination landscape	10
Protein complexes control the meiotic recombination pathways	11
Histone modification shapes the recombination landscape	12
The DNA sequence shapes the recombination landscape	13
Concluding remarks on the factors determining the meiotic recombination landscape	13
Methods in chromatin profiling and crossover distribution analysis	14
Chromosomes conformation methods	14
Cytological methods	15
Methods based on molecular markers and genotyping	16
High-throughput genome sequencing methods	17
References	20
2 Protocol for Chromatin Immunoprecipitation on tomato meiotic stage-specific anthers	35
Abstract	36
Introduction	37
Strategic Planning	37
BASIC PROTOCOL 1: ISOLATION OF MEIOTIC STAGE-SPECIFIC TOMATO ANTHERS	40
BASIC PROTOCOL 2: CHROMATIN EXTRACTION AND IMMUNOPRECIPITATION	47
REAGENTS AND SOLUTIONS	57
COMMENTARY	62
References	69
3 CRISPR/Cas inactivation of <i>RECQ4</i> and <i>FIGL1</i> changes homeologous crossover frequency in an interspecific tomato hybrid	73
Abstract	74
Introduction	75
Results	77
Identification of a <i>RECQ4</i> ortholog in tomato	77

CRISPR/Cas9-mutagenesis and selection of a biallelic <i>emphrecq4</i> null mutation in an interspecific hybrid	77
<i>RECQ4</i> knockout results in increased frequency of ring bivalents in male meiocytes	78
<i>RECQ4</i> knockout results in increased crossovers throughout the genome and extends the genetic map length	80
<i>FIGL1</i> mutation decreases crossover frequency	82
Discussion	86
Experimental Procedures	88
Acknowledgements	89
References	90
4 Identification of the accessible chromatin landscape in Tomato prophase I meiocytes using ATAC-seq	99
Abstract	100
Introduction	101
Results	104
Overview of the FANS-ATAC-seq procedure	104
ATAC-seq data for meiocytes and leaf cells are reproducible	106
Characterization of the peaks identified by ATAC-seq	108
Meiocytes contain more accessible promoters and transcript start sites (TSSs) than leaf cells	108
Accessibility of transposable elements varies between meiocytes and leaf cells	111
ATAC-seq and DNaseI-seq provide similar accessibility profiles	114
ATAC-seq peaks correlate with H3K4me3, but not with H3K27me3	116
Discussion	122
Material and Methods	125
Supplemental table	128
References	129
Supplemental figure	136
5 General Discussion	145
The importance of improving knowledge of meiotic recombination	146
The meiotic recombination landscape of <i>Solanum lycopersicum</i>	146
Unleashing meiotic recombination in plants increasing the class II CO pathway . .	150
Conclusion	151
References	151
6 Summary	159
Samenvatting	161
7 Acknowledgements	163
