After all this time, I can finally sit down and write the final part of my thesis. I hope that I will be able to find the right words to express my gratitude to the people that accompanied me during this journey and that not only helped me to write this thesis but also helped me to grow and develop as a person.

I would like to start by thanking the people that gave me the opportunity to do my PhD at the UvA: Paul Fransz and Esther. I would like to thank you both for giving me chance to jump into plant science, for helping me to integrate in the Netherlands, and for assisting me during the long hours of tomato anther dissections. I am particularly grateful to you Esther for the daily supervision at the start of my PhD, for the mental support and for teaching me my first words in Dutch. I will never forget the first time you pronounced “Wageningen”! I thought I would never be able to pronounce it!

Second, I would like to thank the person without whom this thesis book would not exist: Maïke. I cannot express with words how grateful I am for your help. Thank you for spending so much time on my projects, for the constant feedback on my work. I hope I didn't give you too much troubles with my “s” problem. You are a very good scientist and an even better person.

My many thanks are also directed towards Ronald. I have a lot of admiration for the way you approach science: a very nice mix of enthusiasm and sharpness that make science fun every day. We met halfway through my PhD and I instantly felt that the door was always open to discuss with you. A big thank you for the time you gave me.

By going through a PhD, you do not only encounter a lot of bright scientists but also a bunch of formidable people that I would like to thank here. First, thank you both Stefania and Will for accepting of being my paranymph. Stefania - you are one of a kind, I really appreciated these long discussions we had in the office where we thought of revolutions. Will, thank you for all the good jokes and for your “flegme”, I also didn't expect you to be such a good actor, you did a fantastic job with Blaise's video. Thank you, Blaise, for enlightening me with “Le Monde Diplomatique” and for being the French “anchor” throughout all the time we shared in the lab. Thank you Till for your enthusiasm about everything and you always surprising knowledge. Thank you Rurika for feeding me such nice Japanese food and for having the patience to listen to my very naïve questions about bioinformatics. I also feel a lot of gratitude to the people that surrounded me as part of the NOG group: Thierry, Ilona, Mariliis, Iris, Kathrin, Rechien, Damar, Jose, Jana, Damar, Yanfei, Sita and Miguel.

I had the immense luck of joining the PDEG group during my last year and it was amazing. I need to thank Francesca (and Ronald once more!) for creating such a nice atmosphere in your research group. I immediately felt welcome in the group thanks to Mr. Vacuolino and Tijs. Thank you SJ for being such a nice desk mate and thank you Tijs for joining me and

helping me with snakemake. Pamela I really enjoyed our discussion about football, tennis and karate, I was also very happy of being in your volleyball team! Enric I have no doubt that your PhD will be a success, thank you for being such a good friend! Thanks for all the nice work discussions, lab retreats and everyday help Bets, Jan, Aqib, Kai, Valentina, Abigail, Floris and Lichun.

I have also met some very nice people at the SILS. Thank you Marc for the time you invested in helping me with bioinformatics and for organizing the study group, I have learned a lot thanks to you. I have laughed to a lot of your jokes Manon, thank you for your constant cheerfulness, I hope I can still compete with your baking abilities! Thank you, Benjamin, for letting me know what “ambiancer le coin” means and for sharing your house with me. It was very fun to be part of the SILS PhD council, thanks to Ruy, Elisa, Diana, Gerrald, Eike and Yorick, for creating such a nice atmosphere in the institute. I would have never been able to perform any experiments without the help of Ludek, thank you for growing and taking care of all these tomatoes and for accommodating so much space for them in the green house! Thanks a lot!

I am also grateful to the Developmental Epigenomics group of the LUMC. Thank you Lucia for giving me the chance to do super cool Science! Thank you Cor, Kelly, Maja, Veronica, David and Haoyu for welcoming me into your group and being so enthusiastic of Science!

My main reason to do my PhD at the UvA was the COMREC, I was very lucky to be part of this ITN. Vanesa, Marina, Gunjita, Maria, Jason, Mateusz, Sevgin, Adrian, Pablo, Amy, Divya and Mikel. Guys, I could not have imagined a better environment and I will never forget it. If I had to do this journey again, I'll chose every single one of you to go.

Thalia, I am not sure I can express with words how grateful I am. I cannot thank you enough for your infinite patience in the evenings and weekends where I had to write, for all your little attention that helped me to go forward, for listening to me when I needed it and for your support every day. I am looking forward to the next steps in our life together. Enfin et je pense que « enfin » est le bon terme, je souhaite remercier mes parents et ma famille. Papa, Maman, Nidhal et Fadie, ça m'a pris un peu plus long que prévu mais on y est et c'est grâce à vous. Grace à votre confiance, votre gentillesse et votre patience. Je me souviendrai toujours de ce matin de septembre quand je vous ai dit au revoir avant de prendre le train, beaucoup de choses ont changées entretemps et j'espère continuer à faire votre fierté. Merci pour tout, je vous aime.

If I forgot you, I am sorry, but you were for sure very important to me during this journey!

Merci!
