IMPROVING SUPERFICIAL HYPERTHERMIA TREATMENT TEMPERATURE MATTERS

1. A sufficiently high thermal dose is key for sensitizing radiotherapy in locoregional recurrent breast cancer - *this thesis*
2. Superficial thermometry cannot replace interstitial thermometry for superficial hyperthermia treatment - *this thesis*
3. There are never enough temperature sensors, but there are always too many - *this thesis*
4. Adequate high-resolution thermal monitoring is of utmost importance to minimize thermal toxicity and maximize tumor response - *this thesis*
5. The thermal dose-effect relationship we found suggests that the true potential of hyperthermia may be even larger than previous studies suggested - *this thesis*
6. *Heter is beter - this thesis*
7. Technical physicians are essential in the design, implementation and application of medical technology
8. 'Be passionate about solving the problem, not proving your solution' - Nathan Furr
9. Without data you are just another person with an opinion
10. All roads lead to Rome
