THE ROLE OF CENTRAL AMYGDALA NEURONAL TYPES IN DRUG-RELATED AND APPETITIVE BEHAVIORS

Anna Lien Bouhuis

The role of central amygdala neuronal types in drug-related and appetitive behaviors

ACADEMISCH PROEFSCHRIFT

ter verkrijging van de graad van doctor
aan de Universiteit van Amsterdam

op gezag van de Rector Magnificus

prof. dr. ir. K.I.J. Maex

ten overstaan van een door het College voor Promoties ingestelde commissie,

in het openbaar te verdedigen in de Aula der Universiteit

op woensdag 19 januari 2022, te 11:00 uur

door Anna Lien Bouhuis

geboren te Enschede

Promotiecommissie

<i>Promotors:</i>	prof. dr. H.W.H.G. Kessels	Universiteit van Amsterdam
	prof. dr. B. Li	Cold Spring Harbor Laboratory
<i>Overige leden:</i>	prof. dr. L. van Aelst	Cold Spring Harbor Laboratory
	prof. dr. C.A. Lohmann	Vrije Universiteit
	prof. dr. P.J. Lucassen	Universiteit van Amsterdam
	prof. dr. S.E. la Fleur	Universiteit van Amsterdam
	dr. N. Nadif Kasri	Radboud Universiteit
	dr. N.L.M. Cappaert	Universiteit van Amsterdam

Faculteit der Natuurwetenschappen, Wiskunde en Informatica

CONTENTS

CHAPTER 1. INTRODUCTION	9	CHAPTER 3. CHARACTERIZING THE ROLE OF NEURONAL TYPES IN THE CENTRAL AMYGDALA IN ACUTE METHAMPHETAMINE-INDUCED BEHAVIORS	25
1.1 Central amygdala	9	3.1 Introduction	25
1.2 Connection and composition of the central amygdala	9	3.2 Methamphetamine-induced conditioned place preference and hyperactivity	26
1.2.1 Cell types within the central amygdala	10	3.2.1 The role of SST-expressing CeA neurons in methamphetamine-induced conditioned place preference and hyperactivity	27
1.2.2 Central amygdala connectivity	10	3.2.2 The role of Prkcd-expressing CeA neurons in methamphetamine-induced conditioned place preference and hyperactivity	30
1.3 Central amygdala in various behaviors	10	3.2.3 The role of VIPR2-expressing CeA neurons in methamphetamine-induced conditioned place preference and hyperactivity	33
1.3.1 Central amygdala in defensive behaviors	10	3.3 Methamphetamine-induced anxiety	36
1.3.2 Central amygdala in anxiety	11	3.3.1 The role of SST-expressing CeA neurons in methamphetamine-induced anxiety	36
1.3.3 Central amygdala in appetitive behaviors	12	3.3.2 The role of Prkcd-expressing CeA neurons in methamphetamine-induced anxiety	36
1.3.4 Central amygdala in consummatory behaviors	12	3.3.3 The role of VIPR2-expressing CeA neurons in methamphetamine-induced anxiety	38
1.4 Sex differences	13	3.4 Discussion	40
1.4.1 Sex differences in consummatory and appetitive behaviors	13	CHAPTER 4. THE ROLE OF CENTRAL AMYGDALA NEURONAL TYPES IN APPETITIVE AND HOMEOSTATIC BEHAVIORS	41
1.5 Synaptic plasticity in the central amygdala	13	4.1 Introduction	41
1.5.1 AMPAR plasticity	14	4.2 The role of VIPR2-expressing CeA neurons in continuous access feeding and feeding after food deprivation	42
1.6 Scope of the thesis	14	4.2.1 The role of VIPR2-expressing CeA neurons in feeding behaviors	42
CHAPTER 2. METHAMPHETAMINE-INDUCED NEURONAL AND SYNAPTIC ACTIVITY IN THE CENTRAL AMYGDALA	17	4.2.2 The role of VIPR2-expressing CeA neurons in homeostatic processes in males	45
2.1 Introduction	17	4.3 The role of Prkcd-expressing CeA neurons in feeding behaviors and homeostatic processes	45
2.2 <i>In-vivo</i> calcium imaging after methamphetamine administration	18	4.3.1 The role of Prkcd-expressing CeA neurons in feeding behaviors and homeostatic processes	46
2.2.1 Baseline activity of SST-expressing CeA neurons after methamphetamine administration	18	4.4 Projection pattern of VIPR2-expressing CeA neurons	49
2.3 Synaptic activity after methamphetamine administration	18	4.5 Discussion	50
2.3.1 Synaptic activity of SST-expressing CeA neurons after methamphetamine administration	19		
2.3.2 Synaptic activity of Prkcd-expressing CeA neurons after methamphetamine administration	21		
2.4 Discussion	23		

CHAPTER 5. BETA-ADRENERGIC SIGNALING TRIGGERS SYNAPTIC POTENTIATION AT CENTRAL AMYGDALA NEURONS (INDEPENDENT OF AMPA-RECEPTOR SUBUNIT COMPOSITION)	53	9.3	Viruses	72
5.1 Introduction	53	9.4	Stereotaxic surgery	72
5.2 CeA synaptic activity in the presence of beta-adrenergic stimulation	53	9.5	Electrophysiology	73
5.2.1 Beta-adrenergic stimulation causes synaptic potentiation in SST ⁺ and SST ⁻ CeA neurons	54	9.6	<i>In-vivo</i> calcium imaging	73
5.2.2 CeA neurons express GluA1-4 subunits and removal of GluA3 causes an increase in basal transmission	56	9.6.1 <i>In-vivo</i> calcium imaging data analysis		74
5.2.3 CeA neurons from GluA3-knockout animals show synaptic potentiation upon beta-adrenergic stimulation	57	9.7	Perfusion and immunohistochemistry	74
5.2.4 Beta-adrenergic driven synaptic potentiation of CeA neurons is not mediated by GluA3-containing AMPARs	57	9.8	Data analysis and statistics	74
5.2.5 Dependence of GluA1 on beta-adrenergic driven synaptic potentiation of CeA neurons (preliminary)	60			
5.3 Discussion	61			
CHAPTER 6. GENERAL DISCUSSION	63		ACKNOWLEDGEMENTS	75
6.1 Conclusions	63		REFERENCES	77
6.2 Perspectives	63			
6.3 Future directions	64			
CHAPTER 7. NEDERLANDSE SAMENVATTING	67			
CHAPTER 8. ENGLISH SUMMARY	69			
CHAPTER 9. MATERIALS AND METHODS	71			
9.1 Animals	71			
9.2 Behavioral paradigms	71			
9.2.1 Methamphetamine-induced conditioned place preference	71			
9.2.2 Elevated Plus Maze	71			
9.2.3 Food and water intake	71			
9.2.4 Acute food deprivation	72			
9.2.5 23 hour locomotion	72
