You will be contacted as soon as possible.

Acknowledgements

The first person that needs mentioning in my long list of gratitude is my daily supervisor Maïke: thank you for all the effort and energy you invested in helping me during these four long years.

Hans, a very big thank you for knowing how to motivate me particularly during the writing phase and always encouraging me to fit scientific findings into the big picture. You have also been a reliable support with any matters that were not directly science-related and I am really grateful for your mediation at various time points.

Frank J., thank you for your great guidance with the heterosis project, for your contagious enthusiasm on quantitative epigenetics and your ability to keep people (me) motivated in the face of drawbacks.

To both, Frank and his student René: I am truly grateful for our long-standing collaboration and everything I learned through our numerous discussions.

Joost, I am thankful for your precious tips/ viewpoints on phenotyping and data analysis. I really enjoyed working with you especially due to your pragmatic approach towards research projects and writing. Together with Joost, I also have to mention Marieke and Frank B.: thank you both for being incredibly helpful during my stay with your (former) group in Wageningen and teaching me so much about Arabidopsis phenotyping at the beginning of my PhD.

I also have to point out some people that helped with the paramutation project: Blake Meyers and his group, particularly Tzoo-fen, made small RNA sequencing possible and were always available for any questions on data analysis or protocols. Thank you!

Ludek, thanks for being a very helpful greenhouse manager.

A massive collaborative thank you to all the members of the former SSB-NOG-Group at the UvA: you were incredible colleagues and friends! Lets

Acknowledgements

see if I manage to name everyone: Till, Blaise, Ilona, Isa, Jessica, Jihed, Rurika, Christian, Esther, Matteo and Jana, thanks for lots of socializing, interesting conversations and sharing my miseries. Mannus, my best office buddy, thanks for help on various aspects of coding and statistics. Mariliis, thanks for critically reading my thesis discussion. Damar and Rechien, thanks for helping me out in the lab at numerous occasions. Paul, thanks for driving my specimens around.

I have also had the pleasure to organize the EPS PhD day and a Plant PhD trip to Limburg together with an adventurous crowd from other research groups: Maaïke, Ido, Peter and Mara – thanks for the good times in those early days of PhD!

These years would have been so much harder without really good friends, which I had the luck to find at UvA: Iris, Maria, Dominik and Marco - thanks for all fun, the trips, the coffees and the beers! Without you Amsterdam would not have been the same.

Some words of appreciation also to my few friends outside the SILS-microcosm: Julian, Philip, Yuri and Heike – thanks for many enjoyable days (and nights) in and around Amsterdam!

Beside a good working environment, a happy home is crucial for finding roots in a foreign country and I shared this home with lovely roomies (that were coming and going over the years). A few need a special shout-out: Ymke, you have been a great partner for discussions on various (political) topics and besides, my much-needed shrink. Gorka, our artist soul in disguise, thank you for reminding me to enjoy life when I got too stuck in work. Helen, thanks for being a very reliable friend and our many relaxing tea-chats.

Danke auch an meine Familie für die mentale Unterstützung und die Besuche während meiner Zeit in Amsterdam.

And Anton - thanks for everything at all times.
May the future be a rose garden.
