You will be contacted as soon as possible.
## Contents

1 Introduction

2 Opportunities and limitations of permanent magnetic atom chips
   2.1 Permanent magnet field sources
   2.2 Integrated magnetic atom optics
      2.2.1 Waveguides and derived structures
      2.2.2 Traps, lattices and shift registers
   2.3 ‘Cold’ atoms near ‘hot’ surfaces
   2.4 Conclusions

3 Experimental setup
   3.1 The laser system
      3.1.1 Atomic species - rubidium
      3.1.2 The laser setup
      3.1.3 Frequency locked diode lasers
      3.1.4 Laser stabilization and spectroscopy
      3.1.5 Experimental implementation
   3.2 Ultra-high vacuum system
      3.2.1 Construction, pump-down and bake-out
      3.2.2 Rubidium dispenser
   3.3 Magnetic field coils
   3.4 Imaging
      3.4.1 The optics
      3.4.2 Imaging techniques
      3.4.3 Imaging sequence and analysis
   3.5 Real-time experimental control
      3.5.1 Digital signal processor and LabVIEW user interface
   3.6 The radio frequency source
