Acknowledgements

A tremendous labour-intensive research project has come to an end. Many persons put lot of energy in this project. I honestly would like to extend my thanks to all of them.

I heartily thank all the children and staff members of the Widdonck. Particular thanks go to the care workers and children who were willing to participate in this research project. Without them I wouldn’t have had the chance to write this thesis. Especially I thank pedagogical director Leendert van Esch. Leendert, I feel a lot of respect for your clinical expertise, your compassion for the children and your spirit. Also I thank motortherapist Laurens van Stralen. The camping with you and Ursula and the kids will never to be forgotten. And I would like to mention video supervisor Tom Meulemans. You helped me to get over my fear for video cameras and video recorders. Thanks also go to the director, the behavioral scientists, the social worker, and the persons of the auxiliary services for their great hospitality.

Most grateful I am to Professor Lorna Smith Benjamin, who developed the SASB model. Twice you invited me over to Salt Lake City. The first time you taught me the coding procedure of your SASB model and the second time we talked about the interpretation of my research results. In the past few years we not only met at the University of Utah in Salt Lake City and at your house in Park City, but also at my house in Amsterdam, and in the psychiatric hospital Sint-Amandus in Belgium. To me all these meetings have in common your overwhelming enthusiasm, which gave me the energy to continue my work. I am looking forward to our collaboration in the near future concerning the validation of the SASB model in the Netherlands.

I am indebted to the promotores, Professor Peter G. Swanborn and Professor Frans X. Plooij, for the many critical comments on the manuscript. Peter, you made me think about each single methodological issue and I will do my best to continue this in the rest of my working career. Frans, you made my aware of the existence of the SASB model and know what it is to continue doing observational work for hours, days, weeks, months and years.

Many thanks also go to my daily supervisor Dina Joha. You helped me designing the study, collecting the money for all the video equipment, organizing the chapters of my manuscript, and you reviewed the many masters’ theses of the coders in my project. I always enjoyed the hours we drove in your car to pay a working visit to the Widdonck.

Professor Joop Hox is acknowledged for his statistical advice. I never met a person who is as capable as you are of explaining the most abstract issues in the most perspicuous way.

I am truly thankful to Bill Henry, Associate Professor at the University of Utah. We discussed many ideas about the SASB model and my research project and you wrote many supportive e-mails. I think the beer we tasted in Amsterdam was even better than the one in Salt Lake City. Margo Miles and Kelly Schloredt both in an excellent way taught me how to code social interactions according to the SASB model. I thank you a lot. Margo, you also took me and my friends for an exiting hike trough the Wasatch Mountains.
On describing the residential care process

A million thanks go all the persons who made the immense effort to transcribe and code all the videotapes. You carried on for hours, and hours, and hours. Lea Grubben, you were the first I could introduce into the coding work. Through our teamwork I got to know the tricks of the trade of the SASB coding work. Together we provided coder training to the ‘first Dutch SASB group’. Many thanks go to the die hards of this group of students: Peter Dwarshuis (so happy to know that the Widdonck is now your domain of work), Elise van Houten (we wrote the little green book together), Karin van Merkestein, Laura Vreugdenhil, Nicolet van den Bos, and Miriam Woerdings. Again many thanks go to the members of the ‘second Dutch SASB group’: fellow Iris Voeten, and students Hildy Bruin, Mariska van Heese, Mariska Hemminga, Annemieke Hemrica, Hennie Horeman, Else Oostendorp, Marco Schoester. In addition I would like to thank Rebecca Hoogstrate and Fred Bulder for carrying out the dossier analysis in order to describe demographic and diagnostic characteristics of the children of the Widdonck.

Thanks are due to the staff of the audio-visual service of the University of Amsterdam for some intensive lessons in how to use video equipment and for supporting all SASB coders in the video laboratory. I am also indebted to the librarian Kees Twilt for always finding the references I needed. In addition, I heartily thank Edgar Tossijn, for taking care of the production of the figures in this manuscript, and Greet Boekholt, for designing the cover of this manuscript.

I also thank the members of the ‘Stichting Rijnhove’, especially Professor Jan van der Ploeg, who supported this research project by awarding the ‘Rijnhove-studieprijs’ to one of the masters’ theses, written within the context of this study.

Without the moral support of a many significant persons during many years, this thesis would simply not exist. I am heartily thankful to all of them. • Garnt, you helped me as a computer programmer, reviewer and editor. The many hugs kept me going. • My parents (in-law): Margriet, Pierre, Wim, Greet. You were always there. My brothers and sisters (in-law): Ruud, Paul (many thanks for your comments on chapter 6), Johan, Floor, Rob, Truike, Ian, Maaike, and Frens. Who’s next? • My buddies of our ‘career intevision group’: Renée, Marion, Noelle, and Sabina. We shared the bitter and the best. • My close mates: Sylvia, Gaston, Anne Marie, Meike, and Rob. Our holidays and the many phone calls were invaluable. • My fellow-archaeologists Ardine and Rianne. We plodded in the same period of time. Our next glass of Belgium beer will be the best. • My friend Trees. Since you finished your novel you know how it feels to write a book. • My neighbors in Amsterdam. I hope to enjoy many more picknicks at the Voltaplein with all of you. • All my friends who I know ever since high school in Weert. You never stopped encouraging me. • And last but not least my supportive colleagues at the NIZW / CBO in Utrecht, especially Deanne and Harry. Deanne, I hope we will stay colleagues till we retire and I am looking forward to your thesis. Harry, as my ‘big boss’ you allowed me to spend quite some working hours at writing my thesis.

Finally I thank Harald Merckelbach, Marcel van den Hout, and Peter de Jong. You probably won’t realize, but you were the ones who during my study of mental health scientist at the University of Maastricht definitely and firmly aroused my interest in scientific research.
