**Faculty of Natural Sciences, Mathematics and Computer Science**

The research described in this thesis was carried out at the Van ’t Hoff Institute for Molecular Sciences, University of Amsterdam, The Netherlands.

ISBN: 978-94-028-0485-0

The work described in this thesis was financially supported by the Foundation for Fundamental Research on Matter (FOM), which is part of The Netherlands Organisation for Scientific Research (NWO).
## Contents

1 Introduction 5

2 Computational methods 19

3 **Modeling critical Casimir force induced self-assembly experiments on colloidal dumbbells** 41

4 **Rotational diffusion affects the self-assembly pathways of patchy particles** 59

5 **The role of multivalency in the self-assembly kinetics of patchy particle complexes** 75

6 **The opposing effects of isotropic and anisotropic attraction on dimerisation kinetics** 89
