CONTENTS

1. General introduction and outline of the thesis 9

PART I: RAGE and infection

2. Receptor for advanced glycation end products facilitates host defense during *Escherichia coli* induced abdominal sepsis in mice. 23
   *Journal of Infectious Diseases, 2009*

3. The receptor for advanced glycation end products impairs host defense in pneumococcal pneumonia. 43
   *Journal of Immunology, 2009*

4. Receptor for advanced glycation end products protects against *Klebsiella pneumoniae* induced pneumonia in mice. 67
   *Submitted*

5. Receptor for advanced glycation end products is protective during murine tuberculosis. 85
   *Submitted*

6. Receptor for advanced glycation end products is detrimental during influenza A virus pneumonia. 101
   *Virology, 2009*

PART II: Soluble RAGE, RAGE ligands and damage-associated molecular patterns

7. Ligands of the receptor for advanced glycation end products, including high mobility group box (HMGB) 1, limit bacterial dissemination during *Escherichia coli* peritonitis. 121
   *Under revision*

8. Systemic and local high mobility group box 1 concentrations during severe infection. 141
   *Critical Care Medicine, 2007*

10. Role of Toll-like receptors 2 and 4, and the receptor for advanced glycation end products in high mobility group box 1 induced inflammation *in vivo*. *Shock*, 2008

**PART III: Soluble RAGE levels during inflammation**

12. S100A12 and soluble RAGE levels during severe infection. *Submitted*

15. Endogenous monocyte chemoattractant protein-1 promotes lung inflammation induced by LPS and LTA. *Submitted*

16. Summary, general discussion and future perspectives for research and therapy
