If you believe that digital publication of certain material infringes any of your rights or (privacy) interests, please let the Library know, stating your reasons. In case of a legitimate complaint, the Library will make the material inaccessible and/or remove it from the website. Please Ask the Library: <http://uba.uva.nl/en/contact>, or a letter to: Library of the University of Amsterdam, Secretariat, Singel 425, 1012 WP Amsterdam, The Netherlands. You will be contacted as soon as possible.

Contents

1	Introduction	1
1.1	Strongly interacting electron systems	1
1.2	The Hubbard model	1
1.3	Hard-core spinless fermions	2
1.4	Supersymmetric models for lattice fermions	3
1.5	This thesis	5
1.6	Outline	5
2	A supersymmetric model for lattice fermions	7
2.1	The model	7
2.1.1	Supersymmetry	7
2.1.2	Witten index	8
2.1.3	Lattice fermions	8
2.1.4	Example: 6-site chain	9
2.2	Relation to independence complex and (co)homology theory	11
2.2.1	Independence complex	12
2.2.2	Cohomology and homology theory	12
2.2.3	The 'tic-tac-toe' lemma	13
2.2.4	Examples: 6-site periodic and 4-site open chain	14
3	Superconformal field theory	15
3.1	Continuum theory	15
3.2	Conformal field theory	15
3.3	$\mathcal{N} = 2$ Superconformal field theory	16
3.4	Minimal series	18
3.5	Superpartners and Witten index	18
3.6	Spectral flow	20
4	The supersymmetric model on the one dimensional chain	21
4.1	Introduction	21
4.2	Hamiltonian	21
4.3	Witten index	21
4.3.1	Transfer matrix	22
4.3.2	Ground state momenta	23
4.4	Cohomology	24
4.5	Bethe Ansatz solution in continuum limit	25
4.6	Relation to other models	25

4.6.1	A family of supersymmetric models	26
4.6.2	The XXZ Heisenberg spin chain	26
4.6.3	A supersymmetric matrix model	27
4.7	Free boson with $\mathcal{N} = (2, 2)$ supersymmetry	28
4.7.1	Spectrum	29
4.7.2	Lattice operators: fermion number and momentum	32
4.7.3	Highest weight state and descendants	34
4.7.4	Partition sum	36
4.7.5	Fermi velocity	38
4.7.6	Chain of length $L = \pm 1 \pmod{3}$	38
4.7.7	Finite size spectra	39
4.8	Spectral flow	40
4.8.1	Spectral flow in finite size spectra	45
4.9	Open boundary conditions	47
4.9.1	Continuum theory	47
4.9.2	One-point functions	51
4.10	Entanglement entropy	56
5	The supersymmetric model on two dimensional lattices	59
5.1	Superfrustration	59
5.2	Exact results for the cohomology of Q on two-dimensional lattices	60
5.2.1	Martini lattice	61
5.2.2	Octagon-square lattice	62
5.2.3	Graphs with extra sites on the links	63
5.3	Triangular and hexagonal lattice	64
5.3.1	Numerical results for Witten index	64
5.3.2	Bounds on the size and dimension of the homology of Q	65
5.4	Square lattice	68
6	Ground states of the square lattice related to rhombus tilings	73
6.1	Introduction	73
6.2	Outline of the proof	74
6.3	The cohomology of Q on the chain	74
6.4	Part I: Tilted rectangles and cylinders	76
6.5	Part II: The torus	78
6.5.1	A special case: S_2 consisting of 1 chain	79
6.5.2	The general case: S_2 consisting of p chains	86
6.6	Counting formula for tilings	106
7	The supersymmetric model on 2 and 3 leg ladders	111
7.1	Ladder models as a first step towards 2D systems	111
7.2	Ground states and tilings	111
7.2.1	Kagome ladder	112
7.2.2	Ladder realizations of the square lattice	114
7.3	Spectral flow for ladder realizations of the square lattice	117
7.4	Zig-zag ladder	120
7.4.1	Exact ground states at and near quarter filling	122

7.4.2	Entanglement entropy	123
7.4.3	Charge order at quarter and one fifth filling	124
7.4.4	Flat band	127
7.4.5	Mapping to spin chain	127
7.5	Square ladder	129
7.5.1	First guess for the continuum theory	129
7.5.2	Other $c = 3/2$ theories	136
8	Discussion and outlook	139
8.1	Quantum criticality	139
8.2	Ground states and tilings	140
8.2.1	Edge modes in the square lattice	140
8.2.2	Octagon-square lattice	141
8.2.3	Bulk criticality	142
8.3	Extensions of the supersymmetric model	142
8.4	Superfrustration and black holes	143
	Bibliography	145
	Summary	151
	Samenvatting	153
	Dankwoord	157
