Contents

1 Introduction .................................................. 1
   1.1 Strongly interacting electron systems .............................. 1
   1.2 The Hubbard model ............................................. 1
   1.3 Hard-core spinless fermions ..................................... 2
   1.4 Supersymmetric models for lattice fermions ....................... 3
   1.5 This thesis .................................................. 5
   1.6 Outline ..................................................... 5

2 A supersymmetric model for lattice fermions ......................... 7
   2.1 The model ................................................... 7
      2.1.1 Supersymmetry ............................................ 7
      2.1.2 Witten index ............................................. 8
      2.1.3 Lattice fermions ........................................ 8
      2.1.4 Example: 6-site chain .................................... 9
   2.2 Relation to independence complex and (co)homology theory ...... 11
      2.2.1 Independence complex ..................................... 12
      2.2.2 Cohomology and homology theory .......................... 12
      2.2.3 The 'tic-tac-toe' lemma ................................ 13
      2.2.4 Examples: 6-site periodic and 4-site open chain .......... 14

3 Superconformal field theory ........................................ 15
   3.1 Continuum theory ............................................. 15
   3.2 Conformal field theory ....................................... 15
   3.3 $\mathcal{N} = 2$ Superconformal field theory ..................... 16
   3.4 Minimal series ............................................... 18
   3.5 Superpartners and Witten index ................................ 18
   3.6 Spectral flow ............................................... 20

4 The supersymmetric model on the one dimensional chain ............. 21
   4.1 Introduction .................................................. 21
   4.2 Hamiltonian .................................................. 21
   4.3 Witten index .................................................. 21
      4.3.1 Transfer matrix ........................................... 22
      4.3.2 Ground state momenta .................................... 23
   4.4 Cohomology .................................................... 24
   4.5 Bethe Ansatz solution in continuum limit ....................... 25
   4.6 Relation to other models .................................... 25
