My promotors Prof. Steven Pals and Prof. Pranab Kumar Das. Thank you Steven for agreeing to be my promoter and for your interest in my work. Pran, many thanks for your patience, support, ideas, friendship and for pushing me across the finish line. We have discussed, argued and fought over many things – an unforgettable experience for both of us, I am sure! But in the end it came out fine!

My co-promotor, Prof William Faber, thank you for your interest, sharing clinical knowledge and for help with patient material and data and your invaluable input into all the articles which make up this thesis.

Dr. Ben and Ike Naafs – Ben, it’s a privilege to have you on my thesis committee. Who could have imagined that a chance meeting in Bombay would result in home in Munnekeburen (by the way, most Dutch people that I know are not even able to pronounce the word, let alone know where the place is!). Ike, thanks for always making me feel welcome and teaching me some of the aspects of the Dutch culture and way of life and for going over the introduction, summary and the samenvatting with a fine comb.

The work presented in this thesis would never have been successfully completed without the help of the various collaborators involved. Drs. Linda Oskam and Annemiek Geluk deserve thanks for all their support, especially their suggestions and help with writing of the articles. Dr. Mochammad Hatta and his team in Indonesia are thanked for the patient material. I had the pleasure of working together with Romi Usman from Dr. Hatta’s lab who visited our lab for a short while. Thanks are also due to Elaine Silva and Dr. Fatima Moreno, both from Bauru, Brazil, for a successful collaboration, which culminated in an article. Another collaboration was with Drs. Utpal Sengupta and Keshar Mohanty of the Central Jalma Institute for Leprosy (CJIL), Agra, India – thank you Dr Sengupta and Dr. Mohanty for your support and help in completing the work and writing up the paper. Dr. Marco van Eijk – Marco, I must have frustrated you, taking so long over this article, but its submitted finally – thanks for your help and patience and hope to be able to continue this collaboration.

Dr. Esther de Jong and Toni van Capel deserve special mention for teaching me the culture of monocyte-derived dendritic cells and for advice on experiments and interpretation of results.

My deepest gratitude to those faceless collaborators who made the biggest contribution to this work – the patients. The one aspect which I missed most in this study, unlike my masters’ study in India, was the lack of contact with the patients and study subjects although this was partly due to the fact that the patient samples came from different continents. I do feel strongly that contact with patients makes the researcher aware of the real problems of the disease at the level of the individual and allows the development of a humane approach.
to tackling the problem.

I am grateful to the Koninklijke Nederlandse Akademie van Wetenschappen (KNAW), the Q.M. Gastmann-Wichers Stichting and the Nederlandse Stichting voor Leprabestrijding (NSL) for the financial support which kept me going. Thanks also to the department of pathology of the AMC for the lab facilities and support.

I have the good fortune of having some good friends and colleagues who ensured that life was not an endless monotony of one work day to another. Surinder and Cynthia have always been encouraging and helpful since my initial days in the Netherlands. Big thanks to Surinder for helping me with my Nederlandse samenvatting and the countless other problems which I ran to you for. Anand and Amit – Anand, I still remember fondly those times when we worked throughout the nights with the immunostainings and Amit, we should really plan to take in a movie (maybe 3 back-to-back) at the Pathe soon. Rene van den Wijngaard – Rene, we will go climbing together again soon, I promise! Jurrit – I learned a lot from you my friend, about computers, discovering “de Zotte” and then walking on the Leidsestraat at 3.00 am singing “aussie, aussie, oy, oy, oy”, apart from discussing experiments! Mijntje, I really like your pannenkoek met kaas – thanks for being such a good friend - and thanks for helping me at the last moment (!) with the correction of the samenvatting. Thanks to both Jurrit and Mijntje for agreeing to be my paranimfs. Robbie – thanks for all the encouragement, help with advice and materials – and for the ibuprofen on a “certain” day. I must say my milkshake is getting better! Silvia and Danielle, Loes – what a wonderful time we had as a group (I hope you guys feel the same) – thanks for everything! All the guys and gals at the lab - Ralph, Anya, Richard B, Richard G, Rogier, Wilco, Geurt, Ingrid, Laura, Esther Tjin, Esther B, Joris, Jaklien, Sander, Onno, Peter T, Marius, Chris, Annemieke, Moniek, Anneke, Leonie, Gwen, Jitske, Alex, Mirjam, Maria, Elena - thanks for being such a wonderful group and helping out in times of need. Karene and Kinga – thanks for the encouragement guys (gals) – we became closer these past few months, but I wonder why it didn’t happen earlier. A big thanks for anyone inadvertently missed in the above list. Special thanks to Nike (always helpful), Peter van Amstel (enjoy your retirement), Wilfried, Wim and Elco (all the artwork and for the layout of the thesis – sorry for making it a last moment job!), Frank van den Berg, Lia and Marion and all the people at the diagnostic lab – especially Jos. My new colleagues of the neuropathology group – Karin, Miriam, Jane, Astrid, Rene, Eleonora and Dirk – thanks for the understanding and support. Eleonora and Astrid, the thesis is now almost done – so I don’t have to walk in bleary-eyed at 10 am after having worked till 3.00 am the previous night any more –I will (try to) be more regular (or a gewone mens, as Astrid would say)! And last but not the least, one of my best friends, Marco (Polo) – thanks for being so optimistic and cheerful and with an infectious enthusiasm for work and life. Your enthusiasm kept me going as well.
Lucie Das – we have always had wonderful discussions about life and books. Sorry that I am so cynical about everything – but maybe there is still hope for me….

My family – my little sis, Kavi, you were quite “busy” all the time that I was “wasting” on this thesis – got married, had a wonderful little one and with a second one on the way. And you kept me quite busy travelling up and down for each occasion! Thanks for your love, my little one! Mohan, thanks for everything. Little Sri – yes, I will finally finish my exams in Amsterdam and come home. Amma – finally you can get relieved that my endless “studies” are getting over and that you can start pestering me about the “more important” things in life.

Finally, Appa – wish you were here.

Anand
