The office / the profession

- When was your office founded; who founded the office and are they still in the lead? If not, how do you relate to the founders? Is the scope of the office still the same?
- What schools were followed by the founders; did they have earlier jobs? Where? Or did they work as independent designers?
- How did you find your name; has this remained unchanged? When and how and why did you develop things like business cards and logos?
- What was your portfolio in the first years? Was this coincidental, or planned?
- Did your portfolio change? Were reasons for this very practical, or was this due to changes in society and profession? Were you active or did it just happen?
- What moments, plans, persons or publications were guiding your idea of landscape architecture?
- Did you think, looking back, you founded the office because you had a certain idea on Dutch landscape architecture and felt the new office would have a niche within that idea? Is this documented?
- Was there also a very concrete reason? Did other than landscape architecture motivations play a role?
- Would you in general understand the period since your start as coherent, without large paradigm shifts, or do you wish to define several periods?
- What relevant changes in organisation of the office can be observed in these 10-20 years?
- What part of your portfolio do you consider to be representative for your office?
- Do you think this corresponds with how you are perceived by colleagues, critics and clients?
- Did you try to maintain or change this image?

About drawing

- Could you describe the way of drawing in the office? Is there something like an office style, or is it more personal? Would you consider certain drawings as typically the office? Why?
- Did this change over the years?
- How is the drawing process organized in the office?
- Does hand drawing play a role? How is this related to computer drawing?
- Do you/the office prefer certain drawing means and certain representation modes? Is this related to the type of assignment, or not at all?
- What sort of meanings or functions do drawings have in your opinion? What message or information is transported? Did this change over time?
- Do you consider drawing to be instrumental, as a practical device to get plan processes done, or has it more ideological and theoretical meaning?
- How would you balance the meaning of drawing(s) versus written text and oral speech, as in presentations? Do you have strong opinions on presentation and the means to use in presentations?
- How did you learn to draw in school? What drawing means and representation forms were learned? Did this evolve during your study/internship?
- Did practice, or your professional environment, change your way of drawing?
- Do you see development in drawing? Is this related to software, drawing means or representation forms?
- Are you influenced in your drawing, or could you position your way of drawing?
- Would you say your way of drawing is a generation item?
- Would you consider your way of drawing to be typical for landscape architects, compared to other design disciplines? If not, would you position it differently?
- Do you think one could speak of a Dutch way of drawing in landscape architecture? If so, what would be its characteristics? Is it related to certain assignments? If not, would you state landscape architects all over the world draw the same, or do you see categories?

About time

- What are your associations when speaking about time in landscape?
- Does time play a role in your work?
- Do your projects have to grow, or are they subject to change, literally or metaphorically?
- Do you experience landscape architecture in this respect being different from other design disciplines?
- Do you undertake certain work, in which time does not play a big role, for instance because it is very architectonic?
- If time plays an important role in certain categories of projects: is the importance you give to time obvious, given your general interpretation of landscape architecture? Or is it a precise and particular interpretation of your office?

Background / Professional development

- Do you think you are part of a generation, and in what way would this generation be different from those before you?
- Do you see clear tendencies in the period in which you studied and worked?
- If taking into account some decades of landscape architecture, would you say there are periods, and if so, which period are you in?
- What did inspire your thinking; your decision to start an office?
- What did inspire your thinking; your decision to start an office?
- If you would draw time aspects, would you do so in sketches and/or presentation drawings?
- If you would draw time aspects, would you prefer certain drawing techniques, like diagrams, visualizations, plans or sections?
- Are these time aspects relevant in the exchange with the client and the public?
- Were they asked for by the client or public? Or were they mainly relevant in an internal setting?

Background / Landscape architecture

- Do you feel the category ‘landscape architecture’ is in general appropriate for the way designers function nowadays, and is it appropriate for your work?
- Do you consider yourself as a ‘mainstream’ office in terms of assignments and approaches, or would you say your work represents a particular niche?

Appendix 4. Processing interviews in Scrivener

This screenshot illustrates how Dutch interview text has been reorganized into English tagged fragments in Scrivener software (2012). The next step involves collecting together and tagging all the office fragments. The main themes for the narratives are selected from these collections. The narratives presented in Chapter 4 probably only represent 10% of the entire tagged material, other material being either too fragmentary or not important enough for that specific context.
