## LIST OF TABLES

**TABLE 1.1.** OLS regression testing cognitive mobilization hypothesis and political disaffection hypothesis and explaining general approval of public referendums ................................................................. 38

**TABLE 1.2.** OLS regression explaining change in general approval of public referendums between before and after the campaign ................................................................. 39

**TABLE 1.3.** Referendum support of opponents and supporters in tabloid and broadsheet conditions (positive and negative conditions) ................................................................. 46

**TABLE 1.4.** Mediation model with ‘negative future expectations’ as a mediator for the effect of negative tabloid news (as opposed to negative broadsheet news) on referendum support among opponents ................................................................. 48

**TABLE 1.5.** Mediation model with ‘anger’ as a mediator for the effect of positive tabloid news (as opposed to positive broadsheet news) on referendum support among EU skeptics ................................................................. 50

**TABLE 2.1.** OLS regression predicting EU skepticism (model 1) and logistic regressions (model 2a and 2b) explaining intention to vote NO (wave 1) in the Dutch EU Constitution referendum ................................................................. 71

**TABLE 2.2.** Logistic regression explaining the NO vote (wave 2) in the Dutch EU Constitution referendum ................................................................................................................................. 76

**TABLE 3.1.** Presence of positive and negative frames in news coverage about the referendum ................................................................................................................................. 97

**TABLE 3.2.** Effect of experimental condition on turnout intention for EU skeptics and EU supporters ................................................................................................................................. 99

**TABLE 3.3.** Logistic regression explaining turnout intention (wave 1) ................................................................. 102

**TABLE 3.4.** Logistic regression explaining turnout (wave 2) for NO voters, YES voters and ALL voters ................................................................................................................................. 103

**TABLE 4.1.** Turnout intention of EU skeptics with high and low efficacy beliefs in positive, negative and control condition ................................................................................................................................. 125

**TABLE 4.2.** Risk perception of EU skeptics with high and low efficacy beliefs in positive, negative and control condition ................................................................................................................................. 127

**TABLE 4.3.** Mediation model with risk perception as a mediator for the effect of positive news framing on turnout intention among skeptics with high efficacy beliefs ................................................................................................................................. 128
