LIST OF TABLES

TABLE 1.1. OLS regression testing cognitive mobilization hypothesis and political disaffection hypothesis and explaining general approval of public referendums,..................................................................................................................38
TABLE 1.2. OLS regression explaining change in general approval of public referendums between before and after the campaign..............................................................39
TABLE 1.3. Referendum support of opponents and supporters in tabloid and broadsheet conditions (positive and negative conditions),..............................................................................46
TABLE 1.4. Mediation model with ‘negative future expectations’ as a mediator for the effect of negative tabloid news (as opposed to negative broadsheet news) on referendum support among opponents,........................................48
TABLE 1.5. Mediation model with ‘anger’ as a mediator for the effect of positive tabloid news (as opposed to positive broadsheet news) on referendum support among EU skeptics,..................................................................................................................50
TABLE 2.1. OLS regression predicting EU skepticism (model 1) and logistic regressions (model 2a and 2b) explaining intention to vote NO (wave 1) in the Dutch EU Constitution referendum........................................................................................................................71
TABLE 2.2. Logistic regression explaining the NO vote (wave 2) in the Dutch EU Constitution referendum............................................................................................................................76
TABLE 3.1. Presence of positive and negative frames in news coverage about the referendum.................................................................................................................................97
TABLE 3.2. Effect of experimental condition on turnout intention for EU skeptics and EU supporters..............................................................................................................................99
TABLE 3.3. Logistic regression explaining turnout intention (wave 1).........................102
TABLE 3.4. Logistic regression explaining turnout (wave 2) for NO voters, YES voters and ALL voters.........................................................................................................................103
TABLE 4.1. Turnout intention of EU skeptics with high and low efficacy beliefs in positive, negative and control condition.................................................................................125
TABLE 4.2. Risk perception of EU skeptics with high and low efficacy beliefs in positive, negative and control condition.................................................................................127
TABLE 4.3. Mediation model with risk perception as a mediator for the effect of positive news framing on turnout intention among skeptics with high efficacy beliefs..................................................................................................................128
