The studies presented in this doctoral thesis were conducted at the Department of Public and Occupational Health at Amsterdam UMC, location Academic Medical Center, University of Amsterdam; Amsterdam Public Health research institute, Amsterdam, the Netherlands. The research in this thesis was funded by a grant from the ZonMw Gender and Health Program (grant number 849200008). The studies in chapters 3, 5, 6 and 7 used data from the HELIUS study. The HELIUS study is conducted by the Academic Medical Center Amsterdam and the Public Health Service of Amsterdam. Both organisations provided core support for HELIUS. The HELIUS study is also funded by the Dutch Heart Foundation, the Netherlands Organisation for Health Research and Development (ZonMw), European Union (FP-7), and the European Fund for the Integration of non-EU immigrants (EIF). The study in chapter 4 used data from the ARREST registry. The ARREST registry has received funding from the European Union's Horizon 2020 Research and Innovation Programme under acronym ESCAPE-NET.

Financial support by the Academic Medical Center for the publication of this thesis is gratefully acknowledged.
