1 Introduction

Since early 2007, the ISCO2008 draft 3 version of the EurOccupations database has been used for the response to the survey question “What is your occupation” in the WageIndicator web-survey. Before that period, ISCO1988 has been used. This web-survey is posted on frequently visited websites in an increasing number of countries in Europe and outside Europe. For more information see www.wageindicator.org.

The WageIndicator has been used to produce summary measures of educational levels by occupation for six of the eight EurOccupations countries. For this purposes, the ISCO2008 draft 3 have been recoded to the ISCO2008 final codes, and subsequently the 3-digit codes have been used in the analyses. Similarly, ISCO1988 has been recoded to the ISCO2008 final codes. As for the educational levels, the national education systems in the six countries have been recoded to the ISCED levels, ranging from 0 = no education to 6 = second stage of tertiary education. The distribution over the ISCED categories is shown in the table hereafter. The Table shows that due to incomplete cross over tables, ISCED has no category 3 for Italy and no category 4 for Spain. In total 127,605 observations have been used in this analysis (in the remaining, the 162 observations from France have been excluded).

The occupation’s skill level can be coded in four categories, ranging from unskilled (ISCO-major group 9), semi-skilled (ISCO-major group 0 and 4 to 8), skilled (ISCO-major group 1 and 3), to highly skilled (ISCO-major group 2). The last row of the table shows the correlations between ISCED level and ISCO level, thus between attained education and the skill level of the occupation. The table shows that the correlations vary across countries, with Poland with the lowest and Germany the highest correlations.
