You will be contacted as soon as possible.
# Contents

1 Introduction .......................... 1
  1.1 The Computer in Systems Biology ...................... 2
    1.1.1 The Research Cycle .......................... 3
  1.2 Models: Purpose and Focus ......................... 5
    1.2.1 Macro, Meso and Microscopic Scales ............ 6
    1.2.2 Regimes .................................. 6
  1.3 Stochastic Phenomena in Bacteria .................. 8
  1.4 Computer Methods for Stochastic Chemical Reactions . 10
  1.5 Signalling Systems in Bacteria ..................... 13
    1.5.1 Two-Components Signalling Systems ............. 15
  1.6 Objectives of this Thesis ........................ 17
  1.7 Overview of this Thesis .......................... 18

2 Gillespie Multiparticle Method ................... 21
  2.1 Background .................................. 21
  2.2 Description of GMP ............................ 22
    2.2.1 The Operator-Split Reaction-Diffusion .......... 22
    2.2.2 The Diffusion Process ........................ 24
    2.2.3 The Reaction Process ........................ 25
    2.2.4 Choosing a Lattice Discretisation Size ......... 26
  2.3 Enhancements for Low Numbers of Particles ........ 26
    2.3.1 Qualitative Computational Cost Comparison ...... 28
  2.4 Detailed Analysis of the GMP Reaction Mechanism .... 30
    2.4.1 The Reversible Diffusion-Limited Reaction of a Pair of Molecules .......................... 30
    2.4.2 Effects of the Operator-split on the Distribution ........ 32
  2.5 Discussion .................................. 34
  2.6 Conclusions .................................. 35

3 Noise and Spatial Comparisons .................... 37
  3.1 Noise in Gene Expression ........................ 38
    3.1.1 The Model ................................ 39
    3.1.2 Comparison of Noise ........................ 40
    3.1.3 Reversible Pair ............................ 42
# CONTENTS

3.1.4 Discussion ........................................... 45  
3.2 PTS in *Escherichia coli* ................................. 46  
  3.2.1 The Model ........................................... 46  
  3.2.2 Results ............................................. 48  
  3.2.3 Discussion .......................................... 50  
3.3 Chemotaxis: Activation of Flagellar Motors .......... 51  
  3.3.1 The Model ........................................... 52  
  3.3.2 Results ............................................. 54  
  3.3.3 Conclusions ........................................ 56  
3.4 Conclusions ............................................. 57  

4 Response Time of TCSP 59  
  4.1 The Two-Component Signalling System Model .......... 61  
  4.2 Analysis of the Individual Processes .................. 63  
    4.2.1 Scattered Sensors Reduce Response Time .......... 63  
    4.2.2 Few Transcriptions Suffice to Reduce Time Significantly 65  
    4.2.3 Time to Deliver the Signal to a Promoter ........ 65  
  4.3 Analysis of the Response Time ........................ 66  
    4.3.1 Modelling the Signalling Response Time .......... 66  
    4.3.2 Similar Numbers of Histidine-Kinases and Transcription Factors for an Optimal Response Time 68  
    4.3.3 Correlated Numbers of HK and TF ................ 70  
    4.3.4 Assuming non-Diffusion-Limited Rates ............ 71  
  4.4 Discussion ............................................ 72  
  4.5 Conclusions .......................................... 75  

5 Processivity Effects in Gene Expression 77  
  5.1 Statistical Properties of *Escherichia Coli* Gene Length .... 78  
    5.1.1 Is *E. coli* Representative of Microbes? ......... 79  
  5.2 Modelling Expression of HK and RR .................... 83  
    5.2.1 Transcription ...................................... 84  
    5.2.2 Translation ....................................... 86  
  5.3 Expression Ratios and Optimality ........................ 88  
  5.4 Dynamics of Translation ................................ 88  
  5.5 Discussion ........................................... 92  
  5.6 Conclusions .......................................... 94  

6 Summarising discussion 95  
  6.1 Future work ......................................... 99  

Summary .................................................. 101  

Samenvatting ............................................. 103  

Acknowledgements ......................................... 105  

Publications ............................................. 109
