Hydration layer dynamics and association mechanisms of food and antifreeze proteins

A Molecular Dynamics and Transition Path Sampling study

Zacharias Faidon Brotzakis
Hydration layer dynamics and association mechanisms of food and antifreeze proteins

A Molecular Dynamics and Transition Path Sampling study

ACADEMISCH PROEFSCHRIFT

ter verkrijging van de graad van doctor
aan de Universiteit van Amsterdam,
op gezag van de Rector Magnificus
prof. dr. ir. K. I. J. Maex
ten overstaan van een door het College voor Promoties ingestelde
commissie, in het openbaar te verdedigen in de Agnietenkapel

op dinsdag 7 maart 2017, te 10.00 uur

door

Zacharias Faidon Brotzakis
geboren te Athene, Griekenland
Promotiecommissie

Promotor:

• prof. dr. P. G. Bolhuis (HIMS, Universiteit van Amsterdam)

Overige leden:

• prof. dr. H. J. Bakker (FOM institute AMOLF)
• prof. dr. D. Laage (École Normale Supérieure Paris)
• prof. dr. E. J. Meijer (HIMS, Universiteit van Amsterdam)
• prof. dr. L. Visscher (Vrije Universiteit Amsterdam)
• dr. I. K. Voets (Technische Universiteit Eindhoven)
• dr. J. Vreede (HIMS, Universiteit van Amsterdam)

Faculteit der Natuurwetenschappen, Wiskunde en Informatica

The research reported in this thesis was carried out at the Van ’t Hoff Institute for Molecular Sciences, Faculty of Science, University of Amsterdam (Science Park 904, 1098 XH, Amsterdam, The Netherlands) with financial support by NanoNextNL, a micro and nanotechnology consortium of the Government of The Netherlands and 130 partners.).
Contents

1 Introduction ........................................... 7
   1.1 Proteins in nature and technology ................. 7
       1.1.1 Protein function .............................. 7
       1.1.2 Food Proteins ................................ 8
       1.1.3 Ice binding and anti-freeze proteins ............ 8
   1.2 Protein structure and interactions .................. 9
       1.2.1 Structure of proteins ......................... 9
       1.2.2 Protein-protein interactions ................... 10
   1.3 The role of solvent (water) and co-solutes (e.g. salts) on protein stability ......................... 13
   1.4 Protein association ................................ 16
   1.5 Molecular simulations .............................. 20
   1.6 Aim of the thesis .................................. 21
   1.7 Outline of the thesis .............................. 22

2 Methods ................................................. 25
   2.1 Molecular Dynamics ................................. 26
       2.1.1 Molecular Dynamics of solvated proteins ....... 29
   2.2 Rare Event methods ................................ 32
   2.3 Transition Path Sampling ............................ 32
       2.3.1 Monte Carlo of trajectories .................... 34
       2.3.2 Shooting move .................................. 35

3 Dynamics of hydration water around native and misfolded α-lactalbumin .................. 41
   3.1 Introduction ........................................ 42
   3.2 Methods ........................................... 43
       3.2.1 Simulation setup ............................... 43
### 3.2 Analysis
- 3.2.2 Analysis
- 3.2.3 Polarisation-resolved femtosecond infrared spectroscopy

### 3.3 Results and Discussion
- 3.3.1 Hydrogen bond dynamics
- 3.3.2 Reorientation dynamics

### 3.4 Conclusions

### Appendices
- Appendix 3.A Water HB and reorientation dynamics analysis

### 4 Correlation between water structure and dynamics in the hydration layer of a type III ocean pout anti-freeze protein

#### 4.1 Introduction

#### 4.2 Methods
- 4.2.1 Simulation setup
- 4.2.2 Analysis

#### 4.3 Results and Discussion
- 4.3.1 Water reorientation dynamics slows down at surface
- 4.3.2 Water reorientation dynamics differs locally
- 4.3.3 Hydration water structure
- 4.3.4 Structure - reorientation time correlation
- 4.3.5 Effect of dehydration

#### 4.4 Conclusions

### Appendices
- Appendix 4.A Water structure and dynamics for different temperatures and forcefields

### 5 Stability and growth mechanism of self-assembling anti-freeze cyclic peptides

#### 5.1 Introduction

#### 5.2 Methods
- 5.2.1 System setup
- 5.2.2 Molecular dynamics
- 5.2.3 Transition Path Sampling

#### 5.3 Results and Discussion
- 5.3.1 Nanotube equilibrium properties
- 5.3.2 Mechanism of self-assembly by Transition Path Sampling
- 5.3.3 Analysis of the path ensemble
