## Introduction

1. Top quark physics
   1.1 Physics at the LHC ........................................ 5
   1.2 Understanding the top quark ............................. 9
     1.2.1 Mass .................................................. 9
     1.2.2 Decay ................................................. 10
     1.2.3 Pair production ...................................... 11
     1.2.4 Single top production ................................ 18
   1.3 Top quarks at the LHC .................................... 19
     1.3.1 Parton distribution functions ....................... 19
     1.3.2 Top quark mass and the Higgs boson ............... 21
     1.3.3 Non-Standard Model top decays and \( t\bar{t} \) resonances .... 22
     1.3.4 Pair production with additional jets ........... 23

2. Monte Carlo generators ..................................... 25
   2.1 Generator overview .................................... 25
     2.1.1 Hard scattering ................................... 27
     2.1.2 Parton showers .................................... 28
     2.1.3 Hadronisation and decay ............................ 32
     2.1.4 Underlying event ................................... 33
   2.2 Combining partons showers with matrix elements ...... 35
     2.2.1 Matrix element correction for the parton shower . .... 35
     2.2.2 Matching the parton shower with NLO matrix elements ...... 36
     2.2.3 Merging the parton shower with tree-level matrix elements .... 38
     2.2.4 Comparisons ........................................ 44
   2.3 Conclusions ............................................. 47
3 Detection of top quarks in ATLAS 49
   3.1 The ATLAS detector ........................................ 50
      3.1.1 Inner detector ........................................ 50
      3.1.2 Calorimeters .......................................... 53
      3.1.3 Muon spectrometer .................................... 58
      3.1.4 Trigger system ........................................ 60
   3.2 Jet reconstruction .......................................... 61
      3.2.1 Input to jet reconstruction ............................ 61
      3.2.2 Jet clustering algorithms ............................... 63
      3.2.3 Jet calibration ....................................... 66
      3.2.4 Jet reconstruction performance ........................ 68
   3.3 The typical $t\bar{t}$ event ................................ 70
4 Production of $W + \text{jets}$, $t\bar{t}$, and $t\bar{t}H$ 73
   4.1 Momentum fractions .......................................... 73
   4.2 Reconstruction of $x_1$ and $x_2$ ............................ 75
      4.2.1 Neutrino momentum .................................... 75
      4.2.2 Jets and acceptance ................................... 75
      4.2.3 Jet multiplicity ....................................... 78
      4.2.4 Hadronic $W^{\pm}$ boson events ....................... 79
   4.3 Conclusions .................................................. 80
5 Cross section at $\sqrt{s} = 14$ TeV 81
   5.1 Event topology ............................................. 82
   5.2 Object definitions ......................................... 84
   5.3 Event selection ............................................ 85
      5.3.1 Trigger ............................................... 85
      5.3.2 Preselection ......................................... 85
      5.3.3 Selection efficiencies ................................. 86
   5.4 Top reconstruction .......................................... 87
      5.4.1 Hadronic top quark mass ............................... 87
   5.5 Cross section determination ................................. 91
   5.6 Statistical and systematic uncertainties ................... 92
      5.6.1 Luminosity ........................................... 92
      5.6.2 Parton density functions ............................... 93
      5.6.3 Lepton identification and trigger efficiencies ....... 94
      5.6.4 Initial and final state radiation ...................... 94
      5.6.5 Fit uncertainties .................................... 95
      5.6.6 Jet energy scale ..................................... 95
      5.6.7 Amount of background .................................. 97
   5.7 Results and conclusions .................................... 97
### 6 Top quark pairs with additional jets

- **6.1 Event selection** 99
  - 6.1.1 QCD multi-jet background 99
  - 6.1.2 Including *b*-tagging 101

- **6.2 Jet multiplicity** 104
  - 6.2.1 Jet spectrum 105
  - 6.2.2 Fast versus full simulation 107
  - 6.2.3 Event generator comparison 108

- **6.3 *t*¯*t* cross section measurement** 109
  - 6.3.1 Event selection 109
  - 6.3.2 Mass reconstruction 109

- **6.4 Conclusions and discussion** 112

### 7 *W*± and *Z* boson production

- **7.1 Comparison** 115
- **7.2 Cross sections** 116
- **7.3 *W*± and *Z* boson spectra** 118
- **7.4 Jet spectra** 120
- **7.5 Ratio of *W* + jets and *Z* + jets events** 123
- **7.6 Underlying event** 125
- **7.7 Background from *W* + jets in *t*¯*t* event selection** 128
- **7.8 Conclusions & Discussion** 131

### 8 Outlook

### A List of MC generators and samples

- **A.1 Monte Carlo generators** 137
- **A.2 Samples for √*s* = 14 TeV** 137
- **A.3 Samples for √*s* = 10 TeV** 140

### B Generator comparison

- **B.1 MC@NLO, ALPGEN, and ACERMC** 141
- **B.2 ACERMC/Pythia: ISR and FSR variation** 143
